Carcinogenesis Ultraviolet Princeton Legacy Library:

Carcinogenesis by Ultraviolet Light Harold Francis Blum, 2015-08-11 This book represents the culmination of over fifteen years of experimental and theoretical studies aimed at the elucidation of the process by which ultraviolet light induces cancer. In so far as possible the subject matter is treated from a quantitative point of view whether dealing with the effects of ultraviolet light on isolated cells or on more integrated systems including the induction of cancer. A description of the course of carcinogenesis by ultraviolet light is presented based on experimental data in which cancer is treated as a growing tissue mass. This constitutes probably the most complete summary of a cancer process formulated up to this time. Originally published in 1959. The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. **The National Union Catalogs, 1963-**, 1964 **National Union Catalog**, 1968 **Current Literature**, 1960 **The National union catalog, 1968-1972**, 1973 International Conference on Ultraviolet Carcinogenesis, Margaret L. Carcinogenesis William Montagna, Richard L. Dobson, 2017-03-31 *Advances in Biology of Skin* Volume VII *Carcinogenesis* covers proceedings of the 15th Symposium on the Biology of Skin held at the Oregon Regional Primate Research Center on April 9-11, 1965 under the auspices of the University of Oregon Medical School. This book is composed of nineteen chapters and begins with the mechanism of tissue homeostasis in adult mammals and the kinetics of epidermal reaction to carcinogenic agents and other skin irritants. The succeeding chapters deal with the growth promoting effects of tumors on tissues, the reaction pattern distinctions between normal and neoplastic epithelium and some biological implications of chemical carcinogenesis. Considerable chapters are devoted to various carcinogens including hydrocarbons, viruses, androgens and estrogens. Other chapters consider the physicochemical mechanisms of acceleration of skin carcinogenesis and experimental observations of environmental carcinogenesis. The mechanisms of skin cancer induction due to ultraviolet radiation as well as arsenic induced tumors are examined. The concluding chapters describe some forms of skin tumors such as adnexal tumors and basal cell epithelioma. This book will prove useful to oncologists and researchers in the field of carcinogenesis.
