One Health and Zoonoses John S. Mackenzie, Martyn Jeggo, 2019-08-19 The One Health concept recognizes that the health of humans animals and their ecosystems are interconnected and that a coordinated collaborative multidisciplinary and cross sectoral approach is necessary to fully understand and respond to potential or existing risks that originate at the animal human ecosystems interfaces Thus the One Health concept represents a holistic vision for addressing some of the complex challenges that threaten human and animal health food safety and the environments in which diseases flourish There are many examples showing how the health of humans is related to the health of animals and the environment Diseases shared between humans and animals are zoonoses Some zoonoses have been known for many years whereas others have emerged suddenly and unexpectedly Over 70% of all new emerging diseases over the past few decades have been zoonoses that have emerged from wildlife most often from bats rodents or birds Examples of zoonoses are many and varied ranging from rabies to bovine tuberculosis and from Japanese encephalitis to SARS Clearly a One Health approach is essential for understanding their ecology and for outbreak response and the development of control strategies However the One Health concept and approach is much broader than zoonoses it extends to including antimicrobial resistance food safety and environmental health and consequently impacts on global health security economic wellbeing and international trade It is this breadth of One Health that connects the papers in this Special Issue

Systems: Networks in Action Romain Boulet, Claire Lajaunie, Pierre Mazzega, 2019-05-07 This book investigates how various scientific communities e g legal scientists political scientists sociologists mathematicians and computer scientists study law and public policies which are portrayed here as complex systems Today research on law and public policies is rapidly developing at the international level relying heavily on modeling that employs innovative methods for concrete implementation Among the subject matter discussed law as a network of evolving and interactive norms is now a prominent

sphere of study Similarly public policies are now a topic in their own right as policy can no longer be examined as a linear process rather its study should reflect the complexity of the networks of actors norms and resources involved as well as the uncertainty or weak predictability of their direct or indirect impacts The book is divided into three main parts complexity faced by jurists complexity in action and public policies and complexity and networks The main themes examined concern codification governance climate change normative networks health water management use related conflicts legal regime conflicts and the use of indicators
