Active Learning in College Science Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV

Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for

Fostering Understanding of Complex Systems in Biology Education Orit Ben Zvi

Assaraf, Marie-Christine P. J. Knippels, 2022-05-25 This book synthesizes a wealth of international research on the critical topic of fostering understanding of complex systems in biology education Complex systems are prevalent in many scientific fields and at all scales from the micro scale of a single cell or molecule to complex systems at the macro scale such as ecosystems Understanding the complexity of natural systems can be extremely challenging though crucial for an adequate understanding of what they are and how they work The term systems thinking has become synonymous with developing a coherent understanding of complex biological processes and phenomena For researchers and educators alike understanding how students systems thinking develops is an essential prerequisite to develop and maintain pedagogical scaffolding that facilitates students ability to fully understand the system's complexity To that end this book provides researchers and teachers with key insights from the current research community on how to support learners systems thinking in secondary and higher education Each chapter in the book elaborates on different theoretical and methodological frameworks pertaining

to complexity in biology education and a variety of biological topics are included from genetics photosynthesis and the carbon cycle to ecology and climate change Specific attention is paid to design elements of computer based learning environments to understand complexity in biology education *The Sourcebook for Teaching Science, Grades 6-12* Norman Herr,2008-08-11
