Crop Physiology Case Histories for Major Crops Victor Sadras, Daniel Calderini, 2020-12-05 Crop Physiology Case Histories of Major Crops updates the physiology of broad acre crops with a focus on the genetic environmental and management drivers of development capture and efficiency in the use of radiation water and nutrients the formation of yield and aspects of quality These physiological process are presented in a double context of challenges and solutions The challenges to increase plant based food fodder fiber and energy against the backdrop of population increase climate change dietary choices and declining public funding for research and development in agriculture are unprecedented and urgent The proximal technological solutions to these challenges are genetic improvement and agronomy Hence the premise of the book is that crop physiology is most valuable when it engages meaningfully with breeding and agronomy With contributions from 92 leading scientists from around the world each chapter deals with a crop maize rice wheat barley sorghum and oat quinoa soybean field pea chickpea peanut common bean lentil lupin and faba bean sunflower and canola potato cassava sugar beet and sugarcane and cotton A crop based approach to crop physiology in a G x E x M context Captures the perspectives of global experts on 22 crops

Genomics and Breeding for Climate-Resilient Crops Chittaranjan Kole, 2013-06-18 Climate change is expected to have a drastic impact on agronomic conditions including temperature precipitation soil nutrients and the incidence of disease pests to name a few To face this looming threat significant progress in developing new breeding strategies has been made over the last few decades The second volume of Genomics and Breeding for Climate Resilient Crops describes various genomic and breeding approaches for the genetic improvement of the major target traits Topics covered include flowering time root traits cold heat and drought tolerance water use efficiency flooding and submergence tolerance disease and insect resistance nutrient use efficiency nitrogen fixation carbon sequestration and greenhouse gas emissions

Physiology and Breeding of Cereals Gustavo A. Slafer, Iker Aranjuelo, Roxana Savin, Ignacio Romagosa, 2025-02-14 This Research Topic has been developed in the context of the V Symposium on Physiology and Breeding of Cereals being held in Lleida Catalonia Spain on 8-9 May 2023 The series of Symposia on Physiology and Breeding of Cereals has been aiming to create a fertile space for scientific exchange and to facilitate synergies between scientific groups working on issues relating to the physiology genetics and breeding of cereals These Symposia were initially organized within the context of the research

network on Physiology of Yield and Quality for the Improvement of Cereals and continue to be organized by research groups that were part of the network together with others that join this activity We expect to attract submissions of works presented in the symposium as well as others by non attendees Food security is threatened due to population growth increased individual demands and alternative uses for crops including their use as biofuels In addition over the next few decades climate change will affect the quantity and quality of field crops through the compound effects of elevated atmospheric CO₂ as well as changing temperature and rainfall patterns Cereals are by far the most relevant contributors to the world's plant derived food production Despite the efforts made by breeding and crop management approaches field crop production has stagnated in many regions of the world in recent years

Seed Biology and Yield of Grain Crops, 2nd Edition Dennis B Egli, 2017-02-23 This new edition of an established title examines the determination of grain crop yield from a unique perspective by concentrating on the influence of the seed itself As the food supply for an expanding world population is based on grain crops harvested for their seeds understanding the process of seed growth and its regulation is crucial to our efforts to increase production and meet the needs of that population Yield of grain crops is determined by their assimilatory processes such as photosynthesis and the biosynthetic processes in the seed which are partly regulated within the seed itself Substantially updated with new research and further developments of the practical applications of the concepts explored this book is essential reading for those concerned with seed science and crop yield including agronomists crop physiologists plant breeders and extension workers It is also a valuable source of information for lecturers and graduate students of agronomy and plant physiology

Innovations in Dryland Agriculture Muhammad Farooq, Kadambot H.M. Siddique, 2017-01-05 This book is a ready reference on recent innovations in dryland agriculture and reinforces the understanding for its utilization to develop environmentally sustainable and profitable food production systems It covers the basic concepts and history components and elements breeding and modelling efforts and potential benefits experiences challenges and innovations relevant to agriculture in dryland areas around world

Yield gap analysis of field crops Food and Agriculture Organization of the United Nations, 2018-06-29 To feed a world population that will exceed 9 billion by 2050 requires an estimated 60% increase over current primary agricultural productivity Closing the common and often large gap between actual and attainable crop yield is critical to achieve this goal To close yield gaps in both small and large scale cropping systems worldwide we need 1 definitions and techniques to measure and model yield at different levels actual attainable potential and different scales in space field farm region global and time short and long term 2 identification of the causes of gaps between yield levels 3 management options to reduce the gaps where feasible and 4 policies to favour adoption of sustainable gap closing solutions The aim of this publication is to critically review the methods for yield gap analysis hence addressing primarily the first of these four requirements reporting a wide ranging and well referenced analysis of literature on current methods to assess productivity of crops and cropping systems
