Combined Static Dynamic Deformations With Haptic Rendering:

Combined Static-dynamic Deformations with Haptic Rendering Yasaman Sedaghat,2013 **Combined Static-Dynamic Deformations with Haptic Rendering** Yasaman Sedaghat,2013 We present a real time physically based simulation method for animating high resolution elastic deformations with a focus on haptic interaction To achieve interactive rates without losing accuracy the reduced material stiffness matrix is precomputed by removing the equations that correspond to the internal nodes of the system In addition we employ linear modal analysis to precompute the natural vibration modes of the system We introduce a deformation coupling technique in order to achieve the reduced dynamic behaviour while keeping the high resolution local deformations To explore the implications of the coupling system we describe different integration techniques to time step the reduced dynamic solution in addition to evaluating the force feedback Moreover we show how we handle multiple contact points for non sticky materials To improve the contact handling procedure we employ our sliding technique to include friction We compare our proposed method to the previously existing techniques in terms of run time complexity and deformation properties using 3D meshes embedded in finite elements

Haptic Rendering Ming C. Lin,Miguel Otaduy,2008-07-25 For a long time human beings have dreamed of a virtual world where it is possible to interact with synthetic entities as if they were real It has been shown that the ability to touch virtual objects increases the sense of presence in virtual environments This book provides an authoritative overview of state of the art haptic rendering algorithms **Medicine Meets Virtual Reality 02/10** James D. Westwood,Helene M. Hoffman,Richard A. Robb,D. Stredney,2006-01-15 The book offers papers on many aspects of electronic technology in healthcare Core areas are imaging simulation visualization data networks sensors robotics and displays Medical applications include information guided surgery education and procedural training telemedicine immersive environments stereoscopic projection diagnostic tools rehabilitation and augmented reality The papers describe both completed projects and recent developments in ongoing research The book is a the collection of papers of the 10th annual Medicine Meets Virtual Reality conference January 2002 This volume is a resource for computer scientists working in medical context and for creators of data focused products for clinical care medical education and procedural training **The Biomechanics of the Tactile Perception of Friction** Laurence Willemet,2022-10-31 Humans rely on their sense of touch to perceive subtle movements and micro slippages to manipulate an impressive range of objects This incredible dexterity relies on fast and unconscious adjustments of the grip force that holds an object strong enough to avoid a catastrophic fall yet gentle enough not to damage it The Biomechanics of the Tactile Perception of Friction covers how the complex mechanical interaction is perceived by the nervous system to quickly infer the state of the contact for a swift and precise regulation of the grip The first part focuses on how humans assess friction at the contact initialization and the second part highlights an efficient coding strategy that the nervous system might use to continuously adjust the grip force to keep a constant safety margin before slippage Taken

together these results reveal how the perception of frictional information is encoded in the deformation of our skin The findings are useful for designing bio inspired tactile sensors for robotics or prosthetics and for improving haptic human machine interactions *Haptics Rendering and Applications* Abdulmotaleb El Saddik,2012-01-27 There has been significant progress in haptic technologies but the incorporation of haptics into virtual environments is still in its infancy A wide range of the new society s human activities including communication education art entertainment commerce and science would forever change if we learned how to capture manipulate and reproduce haptic sensory stimuli that are nearly indistinguishable from reality For the field to move forward many commercial and technological barriers need to be overcome By rendering how objects feel through haptic technology we communicate information that might reflect a desire to speak a physically based language that has never been explored before Due to constant improvement in haptics technology and increasing levels of research into and development of haptics related algorithms protocols and devices there is a belief that haptics technology has a promising future **IEEE ... Workshop on Multimedia Signal Processing** ,2004
