Evolution

Q: How can populations evolve to form new species?

17.1 How do genes make evolution possible?

WHAT I KNOW

SAMPLE ANSWER: There are different variations of the same gene.

WHAT I LEARNED

SAMPLE ANSWER: Evolution occurs when the allele frequency in the gene pool of a population changes over time.

17.2 What makes a population's gene pool change?

SAMPLE ANSWER: Over time useful traits (and the genes that control them) accumulate in a population.

SAMPLE ANSWER: Genetic changes can affect the number and types of possible phenotypes organisms in a population can have. These changes provide the variation that populations need to evolve.

17.3 How do new species form?

SAMPLE ANSWER: The genome of a species changes enough that it becomes a new species.

SAMPLE ANSWER: Speciation sometimes occurs when populations become reproductively isolated.

17.4 What can genes tell us about an organism's evolutionary history?

SAMPLE ANSWER: Some species' genomes are very similar. These species are closely related. The opposite is true for species with very different genomes.

SAMPLE ANSWER: A molecular clock uses mutation rates in DNA to estimate the time that two species have been evolving independently.

Microbiology David R. Wessner, Dave Wessner, Christine Dupont, Trevor Charles, Josh D. Neufeld, 2022 Microbiology is a comprehensive textbook that facilitates a thorough understanding of the scope nature and complexity of the science of microscopic organisms. It gives a balanced presentation of foundational concepts, real world applications, and current research and experimentation. The text approaches the subject within the context of exploration and experimentation, integrating a wealth of classroom tested pedagogical features. The material is organized around the three pillars of physiology, ecology, and genetics, helping students appreciate the interconnected and dynamic nature of microbiology and explore the relationship between different types of microbes, other organisms, and the environment. This international adaptation contains up to date coverage of topics including DNA replication and gene expression, viral pathogenesis, microbial biotechnology, adaptive immunity, the control of infectious diseases, and the microbiology of food and water. It also offers integrated coverage of SARS CoV 2 and the impacts of COVID 19, relating it to the importance of an interdisciplinary response to a global pandemic. It also focuses on strengthening the organization of the content and updating the end of chapter problems.

Indian Country Martin Padgett, 2006 Indian Country analyzes the works of Anglo writers and artists who encountered American Indians in the course of their travels in the Southwest during the one hundred year period beginning in 1840. Martin Padgett looks first at the accounts produced by government sponsored explorers, most notably John Wesley Powell's writings about the Colorado Plateau. He goes on to survey the writers who popularized the region in fiction and travelogue, including Helen Hunt Jackson and Charles F. Lummis. He also introduces us to Eldridge Ayer Burbank, an often overlooked artist who between 1897 and 1917 made thousands of paintings and drawings of Indians from over 140 western tribes. Padgett addresses two topics: how the Southwest emerged as a distinctive region in the minds of late nineteenth and early twentieth century Americans, and what impact these conceptions and the growing presence of Anglos had on Indians in the region. Popular writers like Jackson and Lummis presented the American Indians as a primitive culture waiting to be discovered and experienced firsthand. Later, as Padgett shows, Anglo activists for Indian rights, such as Mabel Dodge Luhan and Mary Austin, worked for the acceptance of other views of Native Americans and their cultures.
