Cnn Nepal Earthquake:

Living Under the Threat of Earthquakes Jörn H. Kruhl, Rameshwar Adhikari, Uwe E. Dorka, 2017-11-07 This book addresses earthquakes with a special focus on the Ghorka earthquake which struck parts of central Nepal in April 2015. Drawing on this disastrous event it closely examines various aspects of earthquakes in contributions prepared by international experts. The topics covered include the geological and geophysical background of seismicity, a detailed inventory of the damage done by the earthquake, effective damage prevention through earthquake safe buildings and settlements, restoration options for world heritage buildings, strategies for providing technical and medical relief, and lastly questions associated with public life and economy in a high risk seismic zone. Combining perspectives from various fields, the book presents the state of the art in all earthquake related fields and outlines future approaches to risk identification, damage prevention, and disaster management in all parts of society, administration, and politics in Nepal. Beyond the specific disaster in Nepal, the findings presented here will have broader implications for how societies can best deal with disasters.

Religious Responses to Earthquake and Volcanic Eruption Disasters David Chester, Angus Duncan, John Duncan, 2024-07-26 This book argues that although secular and religious perspectives on disasters have often conflicted, today there are grounds for believing that the world's major faiths have much to contribute to the processes of post disaster recovery and future disaster risk reduction (DRR). It seeks to demonstrate how contemporary dialogues between theologians, disaster scholars, and policymakers are defining new ways of working together. These explore how the resources of religious communities, e.g. buildings, human resources, and finance, may be used to foster successful policies of DRR, particularly in the aftermath of earthquakes and volcanic eruptions. Musing on the relationships between religion and disasters, which has occurred for millennia and has affected many societies worldwide, in societies where the world's major religions, Buddhism, Christianity, Hinduism, Islam, Judaism, and Shinto, have been and remain dominant, attempting to find supernatural explanations for disasters has occurred throughout history, and there have been many theologies seeking to explain why people suffer losses. It is argued that developments both within these traditions of faith and in how disasters are understood by the hazard research community of researchers and planners have allowed a new *modus vivendi* to emerge, which emphasises both a recognition of religious worldviews by academic writers and disaster planners on the one hand, and a desire by people of faith and their leaders to be more fully committed to the goals of DRR. The book will appeal to those who are interested in the interface between disasters and theology across the principal religions of the world. This includes researchers and students in geology, geography, theology, and religious studies. It will also be useful for specialist academic audience and the educated general reader.
