Coastal Problems Geomorphology Ecology And Society At The Coast Management:

Coastal Problems Heather Viles, 2014-02-25 As coastal populations burgeon problems of erosion pollution and coastal change are becoming ever more serious and necessitate scientifically informed management strategies This authoritative new study discusses the causes of and possible solutions to some of the more pressing problems at the coast against a background of the natural geomorphological and ecological workings of coastal environments A holistic approach to the understanding of coastal problems is suggested which integrates geomorphology ecology and society through a consideration of the basic processes at work Coastal problems are caused by both human and natural impacts often working in conjunction with each other thus drawing on their wide experience of temperate and tropical coasts the authors consider all types of coastal problems ranging from those produced entirely naturally to those where the human impact dominates Extensive use is made of case studies drawn from around the world from beach erosion along the Nigerian coast to the recovery of the Vietnamese mangroves from war damage A major theme of the book is that given recent downgrading of predictions of future sea level rise it is the distinctive geomorphological ecological and societal aspects of each coast which are the vital factors Coastal Problems brings together material vital to any attempts to understand and manage our coasts and will be of interest to all those concerned with the environment and its management *Coastal Problems* Heather A. Viles, Tom Spencer, 1995 *Coastal and Estuarine Management* Peter French, 2002-11 Examines the issues surrounding the human use and abuse of estuarine and coastal environments and explores ways in which conservation and management policies can protect this diverse and productive eco system *Coastal Systems* Simon K. Haslett, 2016-07-20 Where oceans land and atmosphere meet three dynamic forces contribute to the physical and ecological evolution of coastlines Coasts are responsive systems dynamic with identifiable inputs and outputs of energy and material In chapters illustrated and furnished with topical case studies from around the world this book establishes the importance of coasts within a systems framework waves tides rivers and sea level change all play critical roles in the evolution of our coasts The SAGE Handbook of Geomorphology Kenneth J Gregory, Andrew S Goudie, 2011-06-13 Geomorphology is the study of the Earth's diverse physical land surface features and the dynamic processes that shape these features Examining natural and anthropogenic processes The SAGE Handbook of Geomorphology is a comprehensive exposition of the fundamentals of geomorphology that examines form process and applications of the discipline Organized into five substantive sections the Handbook is an overview of Foundations and Relevance including the nature and scope of geomorphology the origins and development of geomorphology the role and character of theory in geomorphology geomorphology and environmental management and geomorphology and society Techniques and Approaches including observations and experiments geomorphological mapping the significance of models process and form dating surfaces and sediment remote sensing in geomorphology GIS in geomorphology biogeomorphology human activity Process and Environment including the evolution of regolith weathering fluids flows and

fluxes sediment transport and deposition hill slopes riverine environments glacial geomorphology periglacial environments coastal environments aeolian environments tropical environments karst and karst processes Environmental Change including landscape evolution and tectonics interpreting quaternary environments environmental change disturbance and responses to geomorphic systems Conclusion including challenges and perspectives and a concluding review The Handbook has contributions from 48 international authors and was initially organized by the International Association of Geomorphologists This will be a much used and much cited reference for researchers in Geomorphology Physical Geography and the Environmental Sciences

Beaches and Dunes of Developed Coasts Karl F. Nordstrom, 2004-06-03 Volume on coastal management aimed at consulting engineers research scientists developers and students

The Physical Geography of Southeast Asia Avijit Gupta, 2005-02-24 This will be the first comprehensive and detailed volume on the physical environment of Southeast Asia and will be essential reading for geographers ecologists and environmental managers As the definitive reference work on the region it will cover all aspects of the biophysical environment and its current environmental problems and management practices The topics discussed range from a regional view of landforms and vegetation to specific cases including urban environments coral reefs volcanic hazards and the Mekong River Basin The contributors are distinguished scholarly and have a long association with Southeast Asia This is the fourth volume to be published in the Oxford Regional Environment series

Coastal Defences Peter W. French, 2002-01-04 Coastal Defences aims to present the broad spectrum of methods that engineers use to protect the coastline and investigates the sorts of issues that can arise as a result The first section of the book examines traditional hard techniques such as sea walls and groynes whilst the second looks at the more recent trend of using techniques more sympathetic to nature By looking at each of the main methods of coastal protection in detail the book investigates the rationale for using each method and the consequent management issues presenting a case for and against each of the techniques

Headland-bay Beaches: Static Equilibrium Concept For Shoreline Management Rong-chung John Hsu, Jung Lyul Lee, Antonio Henrique Da Fontoura Klein, Mauricio Gonzalez, Raul Medina, 2021-06-22 Headland bay beaches HBBs are ubiquitous in coastal environment They exist around the world naturally or artificially as byproduct of engineering project Though in various shapes sizes and stability a HBB in static equilibrium not only is a delight for visitors but also offers hope for better beach protection restoration recreation and shoreline management With an empirical parabolic model now available the stability of an existing HBB can be verified the future bay shape downdrift of a harbor can be predefined and a stable HBB can be designed Although a plethora of books are available for coastal and ocean engineering and geomorphology only a countable few have covered engineering applications of HBBs On the contrary this book with focus on the HBBs in static equilibrium aims to offer a comprehensive volume with knowledge and applications for coastal scientists engineers managers students and the general public interested in HBBs Useful software tools for HBBs MEPBAY MeePaSoL and SMC are introduced in the book to aid in applications The authors have set

out to make this book the first unique publication on HBBs by bringing together the old coastal geomorphic knowledge and new concepts for static bay beaches This book also provides numerous examples using the static bay beach concept to assist coastal scientists and engineers on planning and pre design of a stable HBB and for experimentalists consultants and numerical modelers to alleviate the burden of comparing planning options and conducting laborious physical experiments on coastal sedimentation problems
