Coastal-Marine Conservation G. Carleton Ray, Jerry McCormick-Ray, 2009-04-01 Coastal Marine Conservation Science and Policy introduces students and managers to complex conservation and management issues facing coastal nations of the world their citizens and international and non governmental organizations It aims to reduce complexity and inspire a greater consensus for more effective conservation action Presents the coastal realm as a heterogeneous diverse ecosystem of exceptional high biological diversity and productivity and where conservation challenges are most difficult and urgent Examines the critical issues facing coastal marine conservation and the mechanisms for dealing with them Reviews the basic science required for addressing conservation issues by presenting the coastal realm as a land sea ecosystem of global significance and by reviewing the natural history features of coastal marine organisms Presents three ecologically and latitudinally distinct real world case studies to create a context for understanding of regional systems their cultures and their conservation the polar Bering Sea the temperate Chesapeake Bay and the tropical Bahamas Makes apparent the ecological stresses on the coastal realm increasing rates of ecosystem change loss of ecosystem health and fragmented governance Synthesizes the major challenges for conservation and suggests future policy and management strategies including ecosystem management and needs for achieving sustainability and addressing the environmental debt This book is intended for undergraduates and graduates taking courses in coastal and marine conservation and management as well as those actively engaged in coastal marine conservation activities and gives the reader a clear steer to future management approaches References additional to those in the book are available at http://www.blackwellpublishing.com/pdf/ray_references.pdf The artwork is available to download at <http://www.blackwellpublishing.com/ray>

Marine Conservation G. Carleton Ray, Jerry McCormick-Ray, 2013-10-11 Providing a guide for marine conservation practice Marine Conservation takes a whole systems approach covering major advances in marine ecosystem understanding Its premise is that conservation must be informed by the natural histories of organisms together with the hierarchy of scale related linkages and ecosystem processes The authors introduce a broad range of overlapping issues and the conservation mechanisms that have been devised to achieve marine conservation goals The book provides students and conservation practitioners with a framework for thoughtful critical thinking in order to incite innovation in the 21st century Marine Conservation presents a scholarly but eminently readable case for the necessity of a systems approach to conserving the oceans combining superb introductions to the science law and policy frameworks with carefully chosen case studies This superb volume is a must for anyone interested in marine conservation from students and practitioners to lay readers and policy makers Simon Levin George M Moffett Professor of Biology Department of Ecology Evolutionary Biology Princeton University

Citizen Science for Coastal and Marine Conservation John A. Cigliano, Heidi L. Ballard, 2017-10-31 In recent years citizen science has emerged as a powerful new concept to enable the general public students and volunteers to become involved in scientific research A prime example is in

biodiversity conservation where data collection and monitoring can be greatly enhanced through citizen participation This is the first book to provide much needed guidance and case studies from marine and coastal conservation The novelty and rapid expansion of the field has created a demand for the discussion of key issues and the development of best practices The book demonstrates the utility and feasibility as well as limitations of using marine and coastal citizen science for conservation and by providing critical considerations i e which questions and systems are best suited for citizen science presents recommendations for best practices for successful marine and coastal citizen science projects A range of case studies for example on monitoring of seabird populations invasive species plastics pollution and the impacts of climate change from different parts of the world is included Also included are discussions on engaging youth indigenous communities and divers and snorkelers as citizen scientists as well as best practices on communication within citizen science building trust with stakeholders and informing marine policy as part of this exciting and empowering way of improving marine and coastal conservation

Marine Policy Mark Zacharias, 2014-03-14 This textbook provides the reader with a foundation in policy development and analysis and describes how policy including legal mechanisms is applied to marine environments around the world It offers a systematic treatment of all aspects of marine policy including environmental protection fisheries transportation energy mining and climate change It starts with a biophysical overview of the structure and function of the marine environment with a particular emphasis on the challenges and opportunities of managing the marine environment An overview of the creation and function of international law is then provided with a focus on international marine law It explores the geographic and jurisdictional dimensions of marine policy as well the current and anticipated challenges facing marine systems including climate change related impacts and resource over exploitation The book should appeal to senior undergraduate and graduate students and form a core part of the curriculum for marine affairs science and policy courses It will also provide supplementary reading for students taking a course in the law of the oceans but is not aimed at legal specialists

Advances in Marine Environmental Protection: Challenges, Solutions and Perspectives Mehran Idris Khan, Yen-Chiang Chang, Wen-Hong Liu, 2025-04-29 Environments have no boundaries and no borders Managing oceanic environments particularly the threats and risks of pollution should also consider the shared responsibility of all coastal states Emerging issues for oceanic pollution governance include global changes like rising temperature ocean acidification but also disturbances of ecosystem functioning by plastic and pollution by other emerging contaminants for example noise pollution and deep sea mining These call for efficient and sustainable prevention and restoration strategies such as such as efficient urban and industrial sewage treatment plants efficiently administered transnational marine protected areas and among others sustainable aquaculture extensive small scale fisheries Environmental protection warrants the development of interrelationships between marine sciences relevant industries and ocean governance developing internationally accepted rules and regulations for sustainable ocean management This Research Topic will explore possible new domains of ocean

governance and the marine environment from the interdisciplinary perspectives of the rule of law including the international agreement on equal conventions the Convention on Facilitation of International Maritime Traffic the Convention on the International Regulation for Preventing Collisions at Sea and International Convention for the Prevention of Pollution from Ships MARPOL
