

Installation and Connection

If you are having difficulties in adjusting your volume, check the following:

1. Do check that the volume is correct when adjusting the volume.
2. Make sure the volume is not too low.
3. Check your external cable setting — it may be connected when connected to the car.
4. Try a different location for your car — keeping it clear for optimal signal reception.
5. Make sure the volume is properly set.
6. Try a different location in your neighborhood. Stay away from large metal objects (power cables or light poles, towers, etc.) when adjusting.

NOTE

The radio will operate with a DAB of 2 to 1 depending on location or DAB of 2 to 1 for a maximum of 5 minutes of total operating conditions.

External Speaker

The external speaker port (EXT) on the rear panel is used to connect external speakers. The external speaker should have 8 ohm impedance and be able to handle at least 100 watts. When the external speaker is plugged in, the internal speaker is disabled.

Operation

There are 17 controls and 4 indicators on the front panel of your radio unit. These are shown in the illustration on page 42 which may be found out for reference when using the radio.

Controls

→ **QW / On / Volume**

Turn clockwise to raise power to the unit and to set the desired listening level. During normal operation, the volume control is used to adjust the volume level (desired effect of the characteristic position of the volume control, 1 unit).

→ **Speaker**

The control is used to cut off or eliminate receiver background noise in the absence of an incoming signal. For maximum receiver sensitivity, it is recommended the control be adjusted only in the zone where the receiver background noise or external background noise is minimized. Turn only counterclockwise. After every adjustment, all the receiver noise disappears. Any signal to be received must now be slightly stronger than the average receiver noise. Further clockwise rotation will increase the threshold level that a signal must overcome in order to be heard. Only strong signals will be heard at the maximum volume setting.

→ **RF Gain**

Used to reduce the gain of the RF amplifier when receiving low strength signals.

→ **Microphone Gain**

Adjusts the microphone gain in the transmit mode. This controls the gain of the signal that is sent to the antenna. It is recommended to adjust the gain to the level of the microphone.

→ **QW / On / Scan / Hold / Lock**

Turns the mode of operation.
