Coding For Mimo Communication Systems:

Coding for MIMO Communication Systems Tolga M. Duman, Ali Ghrayeb, 2008-03-11 Coding for MIMO Communication Systems is a comprehensive introduction and overview to the various emerging coding techniques developed for MIMO communication systems The basics of wireless communications and fundamental issues of MIMO channel capacity are introduced and the space time block and trellis coding techniques are covered in detail Other signaling schemes for MIMO channels are also considered including spatial multiplexing concatenated coding and iterative decoding for MIMO systems and space time coding for non coherent MIMO channels Practical issues including channel correlation channel estimation and antenna selection are also explored with problems at the end of each chapter to clarify many important topics A comprehensive book on coding for MIMO techniques covering main strategies Theories and practical issues on MIMO communications are examined in detail Easy to follow and accessible for both beginners and experienced practitioners in the field References at the end of each chapter for further reading Can be used with ease as a research book or a textbook on a graduate or advanced undergraduate level course This book is aimed at advanced undergraduate and postgraduate students researchers and practitioners in industry as well as individuals working for government military science and technology institutions who would like to learn more about coding for MIMO communication systems *Multiantenna Systems for MIMO Communications* Franco De Flaviis, Lluis Jofre, Jordi Romeu, Alfred Grau, 2022-05-31 Advanced communication scenarios demand the development of new systems where antenna theory channel propagation and communication models are seen from a common perspective as a way to understand and optimize the system as a whole In this context a comprehensive multiantenna formulation for multiple input multiple output systems is presented with a special emphasis on the connection of the electromagnetic and communication principles Starting from the capacity for a multiantenna system the book reviews radiation propagation and communication mechanisms paying particular attention to the vectorial directional and time frequency characteristics of the wireless communication equation for low and high scattering environments Based on the previous concepts different space time methods for diversity and multiplexing applications are discussed multiantenna modeling is studied and specific tools are introduced to analyze the antenna coupling mechanisms and formulate appropriate decorrelation techniques Miniaturization techniques for closely spaced antennas are studied and its fundamental limits and optimization strategies are reviewed Finally different practical multiantenna topologies for new communication applications are presented and its main parameters discussed A relevant feature is a collection of synthesis exercises that review the main topics of the book and introduces state of the art system architectures and parameters facilitating its use either as a text book or as a support tool for multiantenna systems design Table of Contents Principles of Multiantenna Communication Systems The Radio Channel for MIMO Communication Systems Coding Theory for MIMO Communication Systems Antenna Modeling for MIMO Communication Systems Design of MPAs for MIMO Communication Systems Design Examples and

Designing Three Dimensional Block Codes for MIMO Communication Systems Fatemeh Fazel Sarjoui, 2008 Following the design guidelines of the 3D block code we design Space Frequency and Space Time Frequency block codes for MIMO OFDM that outperform the existing block codes in terms of performance and decoding complexity These coding schemes are referred to as Quasi Orthogonal Space Frequency and Quasi Orthogonal Space Time Frequency block codes due to the quasi orthogonal structure of the underlying code

Precoding Techniques for Digital Communication Systems C.-C. Kuo, Shang-Ho Tsai, Layla Tadjpour, Yu-Hao Chang, 2008-09-18 During the past two decades many communication techniques have been developed to achieve various goals such as higher data rate more robust link quality

and more user capacity in more rigorous channel conditions The most well known are for instance CDMA OFDM MIMO multiuser OFDM and UWB systems All these systems have their own unique superiority while they also induce other drawbacks that limit the system performance Conventional way to overcome the drawback is to impose most of the computational effort in the receiver side and let the transmitter design much simpler than receiver The fact is that however by leveraging reasonable computational effort to the transmitter the receiver design can be greatly simplified For instance multiaccess interference MAI has long been considered to limit the performance of multiuser systems Popular solutions to mitigate MAI issue include multiuser detection MUD or sophisticated signal processing for interference cancellation such as PIC or SIC However those solutions impose great burden in the receiver In this case precoding offers good solutions to achieve simple transceiver designs as we will mention later in this book This book is intended to provide a comprehensive review of precoding techniques for digital communications systems from a signal processing perspective The variety of selected precoding techniques and their applications makes this book quite different from other texts about precoding techniques in digital communication

Optimization Methods in Mobile Communication Systems Milind Pande, Anand J. Kulkarni, Apoorva S. Shastri, 2025-10-22 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content This machine generated volume with chapter introductions by the human expert of summaries of the existing studies furthers our understanding of the optimization methods in mobile communication systems The book provides a machine generated comprehensive yet classified review of the optimization methods techniques and approaches associated with different mobile communications and systems including wavelet based CR OFDM systems MIMO slot antenna with low mutual coupling for 5G networks etc It also covers mainly the techniques for performance analysis of MIMO systems such as
