Application(s) >

HARLEY SOFTAIL

2008-2010

Instruction Manual >

692-1614CL

Page 1 of 4

Read all instructions carefully and completely before installing your new Fi2000 module. It is recommended that a qualified mechanic or technician install this product.

1. Remove the seat and air cleaner assembly, remove both front and rear gas tank mounting bolts. Prop the rear of the gas tank up approximately 2".
2. Locate the factory connector on each fuel injector. Depress the clip on the connector and pull the connector free and move it out of the way. **Note:** A pair of needle nose pliers and a long flat blade screwdriver helps with this job. If you need additional access to the fuel injector connectors, you can remove the Idle Air solenoid by removing the two 5/16" bolts holding it on and loosening the Torx #20 screw on throttle cable bracket. Make sure to use thread-locking compound when reattaching the two 5/16" bolts and correctly position the o-ring when reattaching.
3. Lay the Fi2000 module in the area underneath the seat, do not attach it to the motorcycle, route the injector wire harness forward up the right side of the frame backbone, see Figure 1. Route the forward set of connectors under the upper motor mount.
4. Attach the Fi2000 module's forward injector plug, to the front injector. Take the original female H.D. connector and insert the corresponding Fi2000 male connector into it, refer to Figure 2.
5. Attach the Fi2000 module's rear female injector plug, onto the rear injector. Then take the original female H.D. connector and insert the corresponding male Fi2000 connector, into it. (See Figure 2)
6. It is now time to install the oxygen sensor harnesses. Remove the battery for access to the area underneath it and to aid in harness installation. To help installation, disconnect square connector at right rear corner of battery to help installation of O₂ sensor harnesses, see Figure 3. Route the two O₂ sensor harnesses down between the main harnesses going to the fuse box and the right rear corner of the frame in the battery area. The longer harness continues down past the rear of the transmission and the shorter harness comes forward under the bottom of the oil tank until it is visible in the cut out area where the battery sits. Unplug the factory O₂ sensor connection and plug in the corresponding male and female connectors.
7. Now route the longer harness up the right side of the frame rail. Following the factory harness and zip tie it to the harness in 3 locations.
8. Remove the 2 Allen bolts that secure the voltage regulator bracket to the block, and remove the rectangular cover over the top of this bracket. Ease the voltage regulator forward just enough to access the front O₂ connector. Unplug the connector and then plug the Fi2000 female connector into the original HD male connector. Replace this connection into the voltage regulator bracket and re-assemble onto the bike, making sure the Fi2000 wire exits the top of the cover just like the original wire went in.

* Cobras recommends you always wear a helmet while riding. Please never operate your motorcycle while under the influence of alcohol and/or drugs. Enjoy the new look of your motorcycle and please ride safely.
