## **Cognitive Approaches To Tense Aspect And Epistemic Modality Human Cognitive Processing:**

*Cognitive Approaches to Tense, Aspect, and Epistemic Modality* Adeline Patard, Frank Brisard, 2011 This volume addresses problems of semantics regarding the analysis of tense and aspect TA markers in a variety of languages including Arabic Croatian English French German Russian Thai and Turkish Its main interest goes out to epistemic uses of such markers whereby epistemic modality is understood as indicating a degree of compatibility between the modal world and the factual world Declerck All contributions moreover tackle these problems from a more or less cognitive point of view with some of them insisting on the need to provide a unifying explanation for all usage types temporal and non temporal and all of them accepting the premise that the semantics of TA categories essentially refers to subjective rather than objective concerns The volume also represents one of the first attempts to gather accounts of TA marking in various languages that are explicitly set within the framework of Cognitive Grammar Ultimately this volume aims to contribute to establishing an awareness that modal meaning elements are directly relevant to the analysis of the grammar of time Ten Lectures on the Elaboration of Cognitive Grammar Ronald Langacker, 2017-07-31 This book reviews the basic claims and descriptive constructs of Cognitive Grammar outlines major themes in its ongoing development and applies these notions to central problems in grammatical analysis The initial review covers conceptual semantics the conceptual characterization of grammatical categories grammatical constructions and the architecture of a unified theory of language structure Main themes in the framework s development include the dynamicity of language structure grammar as the implementation of semantic functions systems of opposing elements to serve those functions and organization in strata representing successive elaborations of a baseline structure The descriptive application of these notions centers on nominal and clausal structure with special emphasis on nominal grounding Ten Lectures on the Basics of Cognitive Grammar Ronald Langacker, 2017-07-31 These lectures provide a basic introduction to the linguistic theory known as Cognitive Grammar It is argued that a conceptualist semantics well motivated in its own terms provides the basis for a symbolic view of grammar Consisting in the structuring and symbolization of conceptual content grammar is inherently meaningful and basic grammatical notions have conceptual characterizations An account is given of grammatical categories markings and constructions A number of central topics are examined in detail including subjects possessives locatives voice and impersonals **Modes of Modality** Elisabeth Leiss, Werner Abraham, 2014-01-15 The volume aims at a universal definition of modality or illocutionary speaker s perspective force that is strong enough to capture the entire range of different subtypes and varieties of modalities in different languages The central idea is that modality is all pervasive in language This perspective on modality allows for the integration of covert modality as well as peripheral instances of modality in neglected domains such as the modality of insufficiency of attitudinality or neglected domains such as modality and illocutionary force in finite vs nonfinite and factive vs non factive subordinated clauses In most languages modality encompasses modal verbs both

in their root and epistemic meanings at least where these languages have the principled distribution between root and epistemic modality in the first place which is one fundamentally restricted in its strict qualitative and quantitative sense to the Germanic languages In addition this volume discusses one other intricate and partially highly mysterious class of modality triggers modal particles as they are sported in the Germanic languages except for English It is argued in the contributions and the languages discussed in this volume how modal verbs and adverbials next to modal particles are expressed how they are interlinked with contextual factors such as aspect definiteness person verbal factivity and assertivity as opposed to other attitudinal types An essential concept used and argued for is perspectivization a sub concept of possible world semantics Language groups covered in detail and compared are Slavic Germanic and South East Asian The volume will interest researchers in theoretical and applied linguistics typology the semantics pragmatics interface and language philosophy as it is part of a larger project developing an alternative approach to Universal Grammar that is compatible with functionalist approaches

**The Second Language Acquisition of French Tense, Aspect, Mood and Modality** Dalila Ayoun, 2013-07-04 Temporal aspectual systems have a great potential of informing our understanding of the developing competence of second language learners So far the vast majority of empirical studies investigating L2 acquisition have largely focused on past temporality neglecting the acquisition of the expression of the present and future temporalities with rare exceptions aside from ESL learners leaving unanswered the question of how the investigation of different types of temporality may inform our understanding of the acquisition of temporal aspectual and mood systems as a whole This monograph addresses this question by focusing on three main objectives a to contribute to the already impressive body of research in the L2 acquisition of tense aspect and mood modality from a generative perspective and in so doing to present a more complete picture of the processes of L2 acquisition in general b to bridge the gap between linguistic theory and L2 acquisition c to make empirical findings more accessible to language instructors by proposing concrete pedagogical applications

**Linguistic Foundations of Narration in Spoken and Sign Languages** Annika Hübl, Markus Steinbach, 2018-05-15 In recent years the focus of linguistic research has shifted from sentence to larger units such as text and discourse and accordingly from syntax to semantics and pragmatics This has led to the development and application of corresponding discourse semantic and pragmatic theories such as for instance S DRT Centering Theory Accessibility Theory QUD Generalized Conversational Implicatures Super Monsters and Gesture Semantics and new empirical approaches in the framework of experimental semantics and pragmatics or corpus linguistic discourse analysis The contributions to this collected volume build on these developments and investigate the linguistic foundations of narration from various perspectives The contributions address topics such as speech and thought representation free indirect speech information structure anaphora resolution co speech gestures classifier constructions as well as role shift and constructed action The volume provides new insights in the linguistic structures underlying narration in written spoken and sign languages from an

experimental developmental historical typological and theoretical perspective The contributions will appeal to theoretical linguists sign language linguists typologists literary scholars psycholinguists and philosophers *Perspectives on Narrativity and Narrative Perspectivization* Natalia Igl,Sonja Zeman,2016-03-10 The book offers a novel approach to the question of how to model narrativity against the background of perspectivization By bringing together contributions from neuro and cognitive linguistics literary studies and picture theory the volume uncovers basic mechanisms of perspectivization that are common to the different levels of linguistic structure literary novels and narrative pictures As such it is also a book on narrative perspectivization since its contributions examine in detail the perspectival principles in medieval romantic and postmodern literature in the micro linguistic structure of language narrative pictures literary novels dramatic texts and everyday stories In doing so it contributes both to the theoretical debate on the core definition of narrativity and offers new empirical investigations on perspectival principles in specific historical medial and genre constellations This volume will be of interest to scholars and students of cognitive linguistics narrative research and transmedial narratology cognitive poetics and stylistics New Trends in Grammaticalization and Language Change Sylvie Hancil,Tine Breban,José Vicente Lozano,2018-12-06 The chapters in this volume present a state of the art of grammaticalization research in the 2010s They are concerned with the application of new models such as constructionalization the ongoing debate about the status and modelling of the development of discourse markers and reveal a renewed interest in the typological application of grammaticalization and in the cognitive motivations for unidirectionality The contributors consider data from a wide range of languages including several that have not or marginally been looked at in terms of grammaticalization Chinese Dutch varieties of English French German Japanese Maltese Old Saxon Spanish and languages of the South Caucasian and Zhuang Tai Kadai families The chapters range from theoretical discussions to fine grained analyses of new historical and comparative language data This volume will be of interest to linguists studying morphosyntactic changes in a range of languages and in particular to those interested in models for grammatical change **Tense, Aspect, Modality, and Evidentiality** Dalila Ayoun,Agnès Celle,Laure Lansari,2018-08-15 After an introductory chapter that provides an overview to theoretical issues in tense aspect modality and evidentiality this volume presents a variety of original contributions that are firmly empirically grounded based on elicited or corpus data while adopting different theoretical frameworks Thus some chapters rely on large diachronic corpora and provide new qualitative insight on the evolution of TAM systems through quantitative methods while others carry out a constructional analysis of past tensed verbs using inferential statistics to explore the lexical grammar of verbs A common goal is to uncover semantic regularities and variation in the TAM systems of the languages under study by taking a close look at context Such a fine grained approach contributes to our understanding of the TAM systems from a typological perspective The focus on well known Indo European languages e g French German English Spanish and also on less commonly studied languages e g Hungarian Estonian Avar Andi Tagalog provides a valuable cross linguistic perspective

Conceptualizations of Time Barbara Lewandowska-Tomaszczyk, 2016-06-14 As time cannot be observed directly it must be analyzed in terms of mental categories which manifest themselves on various linguistic levels In this interdisciplinary volume novel approaches to time are proposed that consider temporality without time on the one hand and the coding of time in language including sign language and gestures on the other The contributions of the volume demonstrate that time is conceptualized not only in terms of space but in terms of other domains of human experience as well Renowned specialists in the study of time the authors of this volume investigate this fascinating topic from a variety of perspectives philosophical linguistic anthropological neuro psychological and computational demonstrating a familiarity with both classical and recent approaches to the study of time and including up to date corpus based methods of study The volume will be of interest to philosophers linguists including specialists in cognitive linguistics corpus linguistics and computational linguistics anthropologists neuro psychologists translators language teachers and graduate students
