The Cognitive Neuroscience of Mind Michael S. Gazzaniga, 2010 These essays on a range of topics in the cognitive neurosciences report on the progress in the field over the twenty years of its existence and reflect the many groundbreaking scientific contributions and enduring influence of Michael Gazzaniga the godfather of cognitive neuroscience

Cognitive Neuroscience Michael S. Gazzaniga, 1991-01-16 Cognitive Neuroscience A Reader provides the first definitive collection of readings in this burgeoning area of study

The Mind's Past Michael S. Gazzaniga, 1998-05-07 Why does the human brain insist on interpreting the world and constructing a narrative In this groundbreaking work Michael S Gazzaniga one of the world's foremost cognitive neuroscientists shows how our mind and brain accomplish the amazing feat of constructing our past a process clearly fraught with errors of perception memory and judgment By showing that the specific systems built into our brain do their work automatically and largely outside of our conscious awareness Gazzaniga calls into question our everyday notions of self and reality The implications of his ideas reach deeply into the nature of perception and memory the profundity of human instinct and the ways we construct who we are and how we fit into the world around us Over the past thirty years the mind sciences have developed a picture not only of how our brains are built but also of what they were built to do The emerging picture is wonderfully clear and pointed underlining William James's notion that humans have far more instincts than other animals Every baby is born with circuits that compute information enabling it to function in the physical world Even what helps us to establish our understanding of social relations may have grown out of perceptual laws delivered to an infant's brain Indeed the ability to transmit culture an act that is only part of the human repertoire may stem from our many automatic and unique perceptual motor processes that give rise to mental capacities such as belief and culture Gazzaniga explains how the mind interprets data the brain has already processed making us the last to know He shows how what we see is frequently an illusion and not at all what our brain is perceiving False memories become a part of our experience autobiography is fiction In exploring how the brain enables the mind Gazzaniga points us toward one of the greatest mysteries of human evolution how we become who we are

The New Cognitive Neurosciences Michael S. Gazzaniga, 2000 This second edition reflects the many advances that have taken place in this field particularly in imaging and recording techniques The majority of the chapters in this edition of *The Cognitive Neurosciences* are new and those from the first edition have been rewritten and updated
