Human Enactment Of Intelligent Technologies: Towards Metis And Mindfulness W David Holford, 2021-08-05

This book demystifies what artificial intelligence is examines its strength and limitations in comparison to what humans are capable of and investigates the nature of human adaptive expertise across the concept of metis It also examines a particular family of mindsets that we as humans have adopted over the ages namely epistemologies of representational knowledge These representational perspectives have followed us into numerous fields including how we perceive and comprehend human cognition leading to with a hammer everything looks like a nail syndrome As such this book presents the alternative phenomenological viewpoint of embodied direct reality within the cognitive sciences in the form of radical embodied cognition and more importantly how it allows us to better highlight and comprehend human metis and its adaptive expertise We then examine why we collectively continue to enact and perpetuate predominant mindsets of representations across the phenomena of mindlessness To counter this we re visit the practice of individual and collective mindfulness providing a potential beachhead in our re appropriation of technology artificial intelligence towards achieving the best of both worlds that is allowing human creativity and ingenuity to be expressed with artificial intelligence as a tool to help us do just that across meaningful human control Finally we conclude by examining current top of the horizon activities and debates regarding quantum physics in relation to the human mind and artificial intelligence and how once again representational mindsets need not be the only tool in town
