Conceptual Designing Aggregate Structural Applications:

New Trends in Recycled Aggregate Concrete Jorge de Brito, Chi Sun Poon, Baojian Zhan, 2019-07-15 This book is the result of a Special Issue published in Applied Sciences entitled New Trends in Recycled Aggregate Concrete It identifies emerging research areas within the field of recycled aggregate concrete and contributes to the increased use of this eco efficient material Its contents are organised in the following sections Upscaling the use of recycled aggregate concrete in structural design Large scale applications of recycled aggregate concrete Long term behaviour of recycled aggregate concrete Performance of recycled aggregate concrete in very aggressive environments Reliability of recycled aggregate concrete structures Life cycle assessment of recycled aggregate concrete New applications of recycled aggregate concrete

A Conceptual Model for Designing Recycled Aggregate Concrete for Structural Applications Marco Pepe, 2015-12-12 This book reports on the physical and mechanical characterization of Recycled Aggregate Concrete RAC produced through a partial to total replacement of ordinary aggregates with what have been dubbed Recycled Concrete Aggregates RCAs It proposes a theoretical framework for understanding the relationships between RCAs and RCA and for predicting the resulting behavior of RAC The book demonstrates that in the case of RAC two additional parameters have to be taken into account than with ordinary aggregates due to the composite nature and higher porosity of RCAs By extending Abrams Law for Recycled Aggregate Concrete it represents a first step in the formulation of a general model for predicting the properties of RAC The theoretical approach presented here addresses an important gap in the literature and is expected to stimulate new research on the use of this more sustainable form of concrete in structural applications

Building-Construction Design - From Principle to Detail José Luis Moro, 2024-02-19 Construction is the means by which designing architects and engineers transform a design idea into built reality It is from this perspective that the subject of building construction design is dealt with by the architect Jos Luis Moro in three comprehensive volumes Each is dedicated to the methodological physical and functional fundamentals the conception of a constructional solution and finally its implementation in the constructional detail Not only do the three volumes provide extensive content they also ensure the greatest possible clarity in the text and graphics in order to make it easier for learners to access the material Importantly they focus not only on conveying technical and scientific information but also on demonstrating the complex relationships and interactions between design material and construction Great importance was attached to developing consistent overarching and meaningful correlations between the numerous and highly diverse topics covered After an introduction to planning theory topics Volume 1 Fundamentals addresses sustainability issues in the context of constructional design This is followed by a discussion of the most important material related considerations and their consequences for the constructional application of the materials The range of currently available industrial building products is also presented Furthermore the essential requirements and functions that building structures must fulfill from a structural building physics building acoustics

and fire protection perspective are examined In closing the book considers questions of durability **Automation in Construction toward Resilience** Ehsan Noroozinejad Farsangi, Mohammad Noori, Tony T.Y. Yang, Paulo B. Lourenço, Paolo Gardoni, Izuru Takewaki, Eleni Chatzi, Shaofan Li, 2023-09-29 While the word automation may conjure images of robots taking over jobs the reality is much more nuanced In construction for instance automation is less likely to diminish employment opportunities than it is to increase productivity Indeed automation alongside the global need for new and updated infrastructure and better and more affordable housing can help shape the direction of the construction industry The key will be anticipating and preparing for the shift in part by developing new skills in the current and future workforce This book presents all aspects of automation in construction pertaining to the use of information technologies in design engineering construction technologies and maintenance and management of constructed facilities The broad scope encompasses all stages of the construction life cycle from initial planning and design through the construction of the facility its operation and maintenance to the eventual dismantling and recycling of buildings and engineering structures Features Examines Building Information Management systems allowing on site execution of construction more efficient and for project teams to eliminate mistakes and better coordinate the workforce Presents the latest information on the automation of modular construction production in factories including 3 D printing of components such as facades or even load bearing and essential components
