Cytology of Plant-Microorganism Interactions Michel Nicole, Vivienne Gianinazzi-Pearson, 2012-12-06 Plants interact with a large number of microorganisms which have a major impact on their growth either by establishing mutually beneficial symbiotic relationships or by developing as pathogens at the expense of the plant with deleterious effects These microorganisms differ greatly not only in their nature viruses phytoplasmas bacteria fungi nematodes but also in the way they contact penetrate and invade their host Histology and cytology have brought an essential contribution to our knowledge of these phenomena They have told us for instance how specialized structures of the pathogen are often involved in the adhesion and penetration into the plant how the interface between both organisms is finely arranged at the cellular level or what structural alterations affect the infected tissues They have thus set the stage for the investigations of the underlying
