

2.21 RNA is a universal translator, reading DNA and directing protein production.

SECTION 2.21: RNA acts as a middleman molecule—taking the instructions for protein production from DNA to another part of the cell where, in accordance with the RNA instructions, amino acids are pieced together into proteins.

Chapter 3

Cells

Chapter Outline

1 What is a cell?

3.1 All organisms are made of cells.

SECTION 3.1: The most basic unit of any organism is the cell, the smallest unit of life that can function independently and perform all of the necessary functions of life, including reproducing itself. All living organisms are made up of one or more cells, and all cells arise from other, pre-existing cells.

3.2 Prokaryotic cells are structurally simple, but there are many types of them.

SECTION 3.2: Every cell on earth is either a eukaryotic or a prokaryotic cell. Prokaryotes, which have no nucleus, were the first cells on earth. They are all single-celled organisms. Prokaryotes include the bacteria and archaea and, as a group, are characterized by tremendous metabolic diversity.

3.3 Eukaryotic cells have compartments with specialized functions.

SECTION 3.3: Eukaryotes are single-celled or multicellular organisms consisting of cells with a nucleus that contains linear strands of genetic material. The cells also commonly have organelles throughout their cytoplasm; these organelles may have originated evolutionarily through endosymbiosis or invagination, or both.

2 Cell membranes are gatekeepers.

3.4 Every cell is bordered by a plasma membrane.
