The Rovan Ruins Michael McCloskey, 2018-05-13 The Rovan Ruins is the 11th book in the PIT series Avoiding their alien master at Sol the PIT team has taken up new homes with the Celarans on a huge space habitat aided by their Trilisk technology As they ponder their next move they hear of new alien ruins in a distant system discovered by a Celaran probe ship Uncertain of their future the PIT team decides to do what they do best so they leave on a fresh voyage of discovery

The Kriseel Invitation Michael McCloskey, 2021-08-01 The Kriseel Invitation is the 17th book in the PIT series When the PIT team is formally invited to meet with the Kriseel leaders Telisa splits the team into three groups to accomplish more than diplomacy

Prospects for Interstellar Travel John H. Mauldin, 1992 A detailed introduction is presented to the problems of interstellar space travel The general topics discussed include basics of travel in space advanced propulsion methods relativity and interstellar travel relativistic drives and problems starships as systems missions astrogation observation and communication technological requirements and hazards biological requirements personal social and political considerations interstellar life and civilizations long term prospects

Interstellar Travel Les Johnson, Kenneth Roy, 2024-05-23 Interstellar Travel Propulsion Life Support Communications and the Long Journey addresses the technical challenges that must be overcome to make such journeys possible Leading experts in the fields of space propulsion power communication navigation crew selection safety and health provide detailed information about state of the art technologies and approaches for each challenge along with possible methods based on real science and engineering This book offers in depth up to date and realistic technical and scientific considerations in the pursuit of interstellar travel and will be an essential reference for scientists engineers researchers and academics working on or interested in space development and space technologies With a renewed interest in space exploration and development evidenced by the rise of the commercial space sector and various governments now planning to send humans back to the moon and to Mars there is also growing interest in taking the next steps beyond the solar system and to the ultimate destination planets circling other stars With the rapid growth in the number of known

exoplanets people are now asking how we might make journeys to visit them Discusses the technical challenges that must be overcome to mount interstellar missions Features various aspects of interstellar travel by the world's recognized leading experts in the field Provides referenceable data and analysis for both new and experienced researchers in the interstellar and deep space exploration fields

Interstellar Travel Les Johnson, Kenneth Roy, 2023-03-23 Interstellar Travel Purpose and Motivations is a comprehensive technical look at the necessary considerations for interstellar travel addressed by leading experts in the field from scientists studying possible destinations exoplanets and the vast distances between to those concerned with building institutions and capabilities in society that could sustain such endeavors In addition to the technical medical and anthropological aspects of deep space travel the ethics and morality of spreading Earth based life to other worlds is also examined In the first book of a three book compilation Interstellar Travel Purpose and Motivations offers in depth up to date and realistic technical and scientific considerations in the pursuit of interstellar travel and is an integral reference for scientists engineers researchers and academics working on or interested in space development and space technologies With a renewed interest in space exploration and development evidenced by the rise of the commercial space sector and various governments now planning to send humans back to the moon and to Mars so also is interest in taking the next steps beyond the Solar System and to the ultimate destination planets circling other stars Features detailed overviews with quantification of the technical challenges and potential benefits of interstellar missions Comprehensively covers the considerations for interstellar travel by the world's recognized leading experts in the field Features referenceable data and analysis for both new and experienced researchers in the interstellar and exoplanets fields

Interstellar Travel and Multi-generation Space Ships Yoji Kondo, 2003 A collection of papers presented at the American Association for the Advancement of Science symposium held in Boston Feb 15 2002 this content considers the formidable technical issues and the social and human issues that will impact or be impacted by mankind's excursions to other star systems

Interstellar Travel Source Wikipedia, 2013-09 Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online Pages 46 Chapters Alcubierre drive Bussard ramjet Solar sail Faster than light Generation ship Sleeper ship Starwisp Project Orion Interstellar probe Relativistic rocket Interstellar ark Space travel using constant acceleration Project Daedalus Bracewell probe Electric sail British Rail flying saucer Wait Calculation Enzmann starship Project Longshot TAU Project Icarus Innovative Interstellar Explorer Starseed launcher AIMStar Excerpt Faster than light also superluminal or FTL communications and travel refer to the propagation of information or matter faster than the speed of light Under the special theory of relativity a particle that has mass with subluminal velocity needs infinite energy to accelerate to the speed of light although special relativity does not forbid the existence of particles that travel faster than light at all times tachyons On the other hand what some physicists refer to as apparent or effective FTL is the hypothesis that unusually distorted regions of spacetime might permit matter to reach distant locations faster than it would

take light in the normal or undistorted spacetime Although according to current theories matter is still required to travel subluminally with respect to the locally distorted spacetime region apparent FTL is not excluded by general relativity Examples of FTL proposals are changing the frequency of mass to a higher state by applying high frequency waves of energy the Alcubierre drive and the traversable wormhole although the physical plausibility of some of these solutions is uncertain In the context of this article FTL is transmitting information or matter faster than c a constant equal to the speed of light in a vacuum 299 792 458 metres per second or about 186 282 4 miles per second This is not quite the same as travelling faster

Centauri Dreams Paul Gilster, 2013-04-18 I wrote this book because I wanted to learn more about interstellar flight Not the Star Trek notion of tearing around the Galaxy in a huge spaceship that was obviously beyond existing technology but a more realistic mission In 1989 I had videotaped Voyager 2's encounter with Neptune and watched the drama of robotic exploration over and over again I started to wonder whether we could do something similar with Alpha Centauri the nearest star to the Sun Everyone seemed to agree that manned flight to the stars was out of the question if not permanently then for the indefinitely foreseeable future But surely we could do something with robotics And if we could figure out a theoretical way to do it how far were we from the actual technology that would make it happen In other words what was the state of our interstellar technology today those concepts and systems that might translate into a Voyager to the stars Finding answers meant talking to people inside and outside of NASA I was surprised to learn that there is a large literature of interstellar flight Nobody knows for sure how to propel a spacecraft fast enough to make the interstellar crossing within a time scale that would fit the conventional idea of a mission but there are candidate systems that are under active investigation Some of this effort begins with small systems that we'll use near the Earth and later hope to extend to deep space missions
