Challenging Perspectives on Mathematics Classroom Communication Anna Chronaki, Iben Maj Christiansen, 2006-05-01

The editors and contributors of these ten articles focus on the idea that communication includes both what is happening and being said among participants in a classroom and also the politics values and ideologies that serve as the foundation of the practice They describe how communication thereby involves register representation and contexts through media human interfaces in the classroom and in interpreting mathematics as a text how communication in mathematics teaching becomes social interaction in cooperative settings and classroom activities and how communication translates into practice community identity and policy

Critical Perspectives on International Education Yvonne Hébert, Ali A. Abdi, 2013-02-11 In rapidly globalizing spaces of life any research project on international education would necessarily have multi directional emphases with the quality of observations and analyses reflecting the expanding political economic and cultural intersections which characterize this potentially promising century To respond to these emerging learning and living contexts of our world this book brings together some of the most active and established scholars in the field As such the book represents important epistemic interventions that analyze and critique the institutional socio economic linguistic and pedagogical platforms of international education As the locus of international education cannot be detached from the pragmatics of social development the specific recommendations embedded in this book expand the debates and broaden the boundaries of learning projects that should enhance the lives of people especially those who are continually marginalized by the regimes of globalization Thus the book actively advocates for possibilities of human well beings via different formats of education in diverse locations of life *Critical Perspectives on International Education* offers a historically comprehensive intellectually honest and perspective rich scholarly exploration of a new education globalization dynamic This book courageously offers up diverse voices gathered into a robust and useful conversation regarding global education This book adds greatly to understanding why educational marketplaces must be driven by principles and practices that empower diverse peoples to secure sustainable knowledge benefits that contribute to personal local national and international well being This critical perspective reader will engage scholars researchers and citizens Jim Paul University of Calgary In the current intensifications of globalization and its resulting inequalities it is crucial to better understand the role of knowledge creation and knowledge dissemination Should knowledge be only a commodity to be sold in the market and a tool to increase economic capital or should it be a shared sociocultural capital aimed at improving democracy and the common good In *Critical Perspectives on International Education* Yvonne H bert and Ali A Abdi assemble an impressive array of contributions from all over the world that address this question from a variety of critical perspectives and case studies I recommend this book to everyone interested in the connections between education citizenship development and human well being Daniel

Schugurensky Arizona State University *Refractions of Mathematics Education* Christer Bergsten, Bharath Sriraman, 2015-05-01 The diversity of research in mathematics education has been addressed as both a problem and a strength When manifested through adherence to different intellectual roots and theoretical orientations diversions constitute refractions of mathematics education The collection and analysis of empirical data in a study are by necessity refracted through the specific analytical lens employed as well as the aim of the study itself Refractions can also refer to looking at old phenomena through new lenses The chapters in this book are refracted through philosophical political mathematical and personal lenses by distinguished authors in the field addressing issues about the elusive experience of doing mathematics purification of texts refractions mathematics and ethnomathematics political messages in textbook tasks mathematics education policy debate the political in mathematics education research philosophy and mathematics meanings and representations identity of mathematical modeling and dilemmas in the teaching of calculus An ancient Sanskrit adage states that Knowledge is something that grows when shared but shrinks when hoarded Academics engaged in the generation of new Knowledge are blessed with both the time and the freedom to engage in pursuits that allow for intellectual pleasure As a phenomenon of the Zeitgeist many have succumbed to the increased corporatization of academic work engaging in activities for monetary and self advancement purposes Are there any real intellectuals left in academia a l Adorno Bourdieu Chomsky Foucault among others This Festschrift is dedicated to academics that don t bother with self promotion or aggrandizement of themselves or their ideas in simplistic terms **Critical Mathematics Education** Paul Ernest, Bharath Sriraman, Nuala Ernest, 2016-01-01 Mathematics is traditionally seen as the most neutral of disciplines the furthest removed from the arguments and controversy of politics and social life However critical mathematics challenges these assumptions and actively attacks the idea that mathematics is pure objective and value neutral It argues that history society and politics have shaped mathematics not only through its applications and uses but also through molding its concepts methods and even mathematical truth and proof the very means of establishing truth Critical mathematics education also attacks the neutrality of the teaching and learning of mathematics showing how these are value laden activities indissolubly linked to social and political life Instead it argues that the values of openness dialogicality criticality towards received opinion empowerment of the learner and social political engagement and citizenship are necessary dimensions of the teaching and learning of mathematics if it is to contribute towards democracy and social justice This book draws together critical theoretic contributions on mathematics and mathematics education from leading researchers in the field Recurring themes include The natures of mathematics and critical mathematics education issues of epistemology and ethics Ideology the hegemony of mathematics ethnomathematics and real life education Capitalism globalization politics social class habitus citizenship and equity The book demonstrates the links between these themes and the discipline of mathematics and its critical teaching and learning The outcome is a groundbreaking collection unified by a shared concern with critical perspectives of mathematics

and education and of the ways they impact on practice Mathematics Teacher Education in the Public Interest Bharath Sriraman, Laura J. Jacobsen, Jean Mistele, 2013-02-01 Mathematics teacher education has a critical role to play in preparing teachers to put at center stage goals to support equity in mathematics education and to diversify student interest and participation in mathematics These goals must also resonate with broader public interest goals to improve educational and social conditions both in the U S and abroad The Mathematics Teacher Education in the Public Interest book aims to support mathematics teacher educators to prepare teachers with new knowledge and skills to support all students to learn mathematics and to become informed engaged and critical citizens within their community nation and world While internationally there is considerable interest among mathematics educators in issues of equity and social justice the literature on mathematics teacher education for equity and social justice thus far has been very limited The book provides theoretical discussions on the need for equity and social justice emphases in mathematics teacher education as well as practical examples from mathematics teacher educators documenting their own professional efforts to center practices on equity and social justice Section emphases include critical perspectives on mathematics teacher education the use of equity and social justice themed activities in mathematics teacher preparation courses and issues of identity and community and cultural contexts in mathematics teacher education In addition syntheses of major ideas of the book are offered by experienced researchers The Psychology of Mathematics Education , 2008-01-01 This book paints an alternative and contemporary portrait of psychology within mathematics education drawing on psychoanalytic practices and theory Mathematics education is still a fairly new social science that began as an adjunct to the practice of mathematics in schools some forty years ago defined by a marriage with cognitive psychology As a consequence school mathematics has often been seen as a scientific enterprise centred on the operation of individual minds confronting mathematical ideas Meanwhile psychoanalysis had earlier come into existence through the work of Sigmund Freud And for much of his life Freud had similarly seen his work as scientific a view that later fuelled mainstream practices in psychology Yet Freud s engagement with his patients combined with his literary capabilities produced surprising results defining humans in ways that transcended mere scientific assessment Rather his accounts of humans weaved a rich social tapestry in which individuals were understood relationally to those who shared their world And through re telling the story lines of their lives individuals were able to create alternative futures This dimension of Freud s work provoked an alternative tradition best exemplified in the work of Lacan in which narrative based understandings linking humans to the social world replaced cognitive models centred on controlling individuals through particular understandings of normality Through its eleven chapters this book provides accounts of how children teachers researchers and mathematical learning can be understood differently towards emphasising how they are each consequential to the many ways in which the world can be created and described **Third International Handbook of Mathematics Education** M.A. (Ken) Clements, Alan Bishop, Christine Keitel-Kreidt, Jeremy

Kilpatrick, Frederick Koon-Shing Leung, 2012-11-15 The four sections in this Third International Handbook are concerned with a social political and cultural dimensions in mathematics education b mathematics education as a field of study c technology in the mathematics curriculum and d international perspectives on mathematics education These themes are taken up by 84 internationally recognized scholars based in 26 different nations Each of section is structured on the basis of past present and future aspects The first chapter in a section provides historical perspectives How did we get to where we are now the middle chapters in a section analyze present day key issues and themes Where are we now and what recent events have been especially significant and the final chapter in a section reflects on policy matters Where are we going and what should we do Readership Teachers mathematics educators ed policy makers mathematicians graduate students undergraduate students Large set of authoritative international authors Researching the Socio-Political Dimensions of Mathematics Education Paola Valero, Robyn Zevenbergen, 2006-04-11 Mathematics education research as a discipline is situated at the confluence of an array of diffuse seemingly incommensurable and radically divergent discourses Research claims that have grown out of mathematics education are wide ranging and antagonistic rather than circumscribed by hidebound disciplinary frames While there has never been a unified totalising discipline of knowledge labelled mathematics education research and while it has always been a contested terrain it is fair to say that the master paradigm out of which this field has been generated has been that of cognitive psychology Mainstream mathematics education knowledges refracting the master discourse of psychology whereby cognition serves as the central privileged and defining concept clearly delimits its possibilities for serving as a social tool of democratic transformation The central point of departure of this new collection is that mathematics education research is insufficiently univocal to support the type of uncompromising interpretation that cognitive psychologists would bring to it The hallmark contribution of this pathbreaking volume edited by Paola Valero and Robyn Zevenbergen is the paradigmatic shift the authors have effected in the field of mathematics education research taking up a position at the faultline of socio cultural analysis and critical pedagogy **STEM in Science Education and S in STEM** , 2021-01-11 This book presents an international perspective of the influence of cultural issues on STEM reform Effective STEM education is of considerable importance internationally because there is increase pressure by governments to produce technically skilled people from the compulsory education sectors people capable of participating actively in the so called knowledge economy or knowledge society An important and distinguishing feature of the book is that it draws upon the empirical experiences and research of the local experts from an extremely diverse cohort across the world Contributors are Nayif Awad David Barlex Alexandra Bazdar Saouma BouJaoude Heba EL Deghaidy Marwa Eltanahy Sibel Erduran Sufian Forawi Clare Gartland Lilia Halim Ying Shao Hsu Zanaton Haji Iksan Deena Khalil Meredith Kier Nasser Mansour Mohamad Sattar Rasul Seema Rivera Dalene Swanson Paige Teamey Tuan Mastura Tuan Soh Russell Tytler No l Williams and Yi Fen Yeh Research in Mathematics Education in Australasia 2004 - 2007 , 2008-01-01 Every four years

beginning in 1984 the Mathematics Education Research Group of Australasia MERGA produces a review of Australasian research in mathematics education The authors of the chapters in this volume have summarised and critiqued research conducted during the period 2004 2007 The research foci for the period are reflected in the chapter titles Working under tight funding opportunities and the shadow of demanding research accountability measures the research undertaken has nonetheless been rigorous far ranging and at the cutting edge In bringing this regular review of the best of Australasian mathematics education to a broader international audience for the first time readers will recognise the outstanding contributions made by Australasian mathematics education researchers and the potential their findings have to inform and direct future directions in the field
