Bandwidth Allocation for Video under Quality of Service Constraints Bushra Anjum, Harry G. Perros, 2015-01-20

We present queueing based algorithms to calculate the bandwidth required for a video stream so that the three main Quality of Service constraints i.e. end to end delay jitter and packet loss are ensured Conversational and streaming video based applications are becoming a major part of the everyday Internet usage The quality of these applications QoS as experienced by the user depends on three main metrics of the underlying network namely end to end delay jitter and packet loss These metrics are in turn directly related to the capacity of the links that the video traffic traverses from its source to destination The main problem that this book addresses is how much bandwidth we should allocate on the path from source to destination of a video traffic flow such that the end to end delay jitter and packet loss of the video packets are within some expected required bounds Cisco DQOS Exam Certification Guide (DQOS Exam #9E0-601 and QOS Exam #642-641) Wendell
