Control Theory in the Plane Otomar Hájek, 2009-03-20 An important scientific innovation rarely makes its way by gradually winning over and converting its opponents What does happen is that its opponents die out and that the growing generation is familiarised with the idea from the beginning Max Planck 1936 Humans have always attempted to influence their environment Indeed it seems likely that the understanding of aspects of this environment and its control whether by trial and error or by actual study and analysis are crucial to the very process of civilisation As an illustration boats and ships were used even in pre history for shipping transport discovery and trade Small sailing craft are controlled primarily by working the main sheet and rudder in conjunction Once mastered further experimentation see e g the fifth chapter of the Kon Tiki Expedition with an entertaining account of the possible use of multiple movable centerboards on a sailing raft led to a significant change keeled hulls and corresponding rigging which made sailing against the wind possible This was a relatively recent feature even the far voyaging Vikings relied primarily on beachable ships and recourse to oars It was probably crucial in the west to east settlement of Oceania from Taiwan to Easter Island A 20th century development is the self steering device which regulates boat travel automatically under mildly varying wind conditions but this has had a much smaller social impact
