It features articles in six areas relating to environmental tax reforms, experiences and potential market based instruments for climate protection, market based instruments for environmentally sound management of energy, market based instruments for environmentally sound management of water, market based instruments for environmentally sound management of urban areas, and evaluation of market based environmental policies. The quality of the articles published in Volume VIII reflects the excellent and inspiring work of leading scholars and practitioners in the field of environmental taxation. It seeks to provide insights and analysis for achieving environmental goals through tax policy. By sharing the perspectives of the authors in response to the diverse challenges posed by environmental taxation issues, effective approaches used in one country may be considered and possibly implemented by governmental authorities in other countries. Each volume contains pioneering and thought provoking articles contributed by the world's leading environmental tax scholars. This seventh volume focuses on the special problems of the urban environment and the challenges which confront cities and mega cities. It examines tax issues relating to congestion and pollution control, road pricing and other forms of transportation management, housing and the construction industry, energy generation and consumption, trade, carbon taxes and new eco service markets, research and development taxes. It contains case studies from developed as well as developing countries. Contributors come from various disciplines, particularly law, accounting and economics. The countries examined include Australia, Brazil, Canada, China, Hong Kong, Japan, Kenya, Pakistan, Singapore, Spain, Uganda, and the United States. *Environmental Taxation and Climate Change* Hope Ashiabor, Larry Kreiser, Julsuchada Sirisom, Janet E. Milne, 2011 Whilst green taxes face new challenges, there is now an accumulated international experience on which to reflect. This new collection of papers provides material for further vigorous argument.

evinces a keen appreciation of these realities I recommend this generally very readable book as a helpful reflection of some recent key concerns in the environmental policy area It constitutes a welcome addition to the literature inviting critical responses from the specialist but also drawing in the newcomer to the subject John Snape University of Warwick UK The level of public and political debate on carbon taxes is low Politicians fear the impact of a carbon tax on businesses and low income groups as well as on their popularity among voters This valuable book studies carbon taxes from many angles with ample attention paid to practical examples and shows that a smartly designed carbon tax is an indispensable instrument in the transition to a less carbon dependent economy Jonathan Verschuuren The University of Sydney Australia and Tilburg University The Netherlands Containing an authoritative set of original essays Environmental Taxation and Climate Change provides fresh insights and analysis on how environmental sustainability can be achieved through fiscal policy Written by distinguished environmental taxation scholars from around the world this timely volume covers a range of hotly debated subjects including carbon related taxation in OECD countries implications of environmental tax reforms innovative environmental taxation and behavioural strategies as well as many other relevant topics This up to date and well informed book will appeal to policymakers in government as well as students researchers and academics in environmental law and other academic disciplines

The Yearbook of European Environmental Law Thijs Etty, Han Somsen, 2008-09-04 Academics and students will find a wealth of information in the stimulating and clearly written articles The well structured and reliable annual surveys are specifically designed to provide easy access to the very latest developments in EU environmental law

Tax Law and the Environment Roberta F. Mann, Tracey M. Roberts, 2020-07-06 Tax Law and the Environment A Multidisciplinary and Worldwide Perspective takes a multidisciplinary approach to explore the ways how tax policy can be used to solve environmental problems throughout the world using a multi jurisdictional and multidisciplinary approach Environmental taxation involves using taxes to impose a cost on environmentally harmful activities or tax subsidies to provide preferred tax treatment to more sustainable alternatives to those harmful activities This book provides a detailed analysis of environmental taxation with examples from around the world As the extraction processing and use of energy resources has been a major cause of environmental harm this book explores the taxation and subsidization of both fossil fuels and renewable energy Its analysis of the past present and future potential of environmental taxation will help policymakers move economies toward sustainability as well as informing students academics and citizens about tax solutions for pressing environmental issues

Green National Accounting in Theory and Practice Peter Birch Sørensen, 2025-06-13 This book explains the theoretical and empirical foundations for constructing a measure of a country's Green GDP and how this measure relates to the conventional GDP Opening with an overview of the academic literature on green national accounting the first chapter sets up an analytical model of the interaction between a small open economy and the environment to derive a theoretically founded measure of the economy's Green Net National Income Green GDP The

book then illustrates how the theory can be applied in practice to produce a time series for the evolution of Denmark's Green GDP and its various components with an emphasis on the environment over the last thirty years. As far as possible the data used in the calculations were constructed in accordance with international statistical guidelines. Therefore the careful explanation of the methodology which is outlined in the book can be applied to other countries using comparable data. This book will be of significant interest to scholars in the field of environmental economics and statisticians and practitioners working on green national accounting.

Environmental Taxation Law John Snape, Jeremy de Souza, 2016-05-06 The theoretical arguments for environmental taxes and other types of economic instruments for environmental protection have been discussed extensively in the literature. Rather less well discussed has been the extremely complex form that such instruments have in fact taken in practice. *Environmental Taxation Law: Policy Contexts and Practice* examines the legal implications of introducing environmental taxes and other economic instruments into the regulatory framework of UK law. In doing so it analyzes and explains the difficulties of grafting environmental taxes onto the complexities of existing regulatory structures, not all of which of course were originally devised with environmental considerations in mind. Although the focus of the book is the UK's pioneering implementation of a web of distinct yet interrelated policy measures, it locates the UK's taxes and instruments not simply in their broader context of market and environmental regulation but also in the contexts of European and international law.

Carbon Pricing, Growth and the Environment Lawrence A. Kreiser, Ana Yábar Sterling, Pedro Manuel Herrera Molina, Janet E. Milne, Hope Ashiabor, 2012-01-01 The scope, depth and persistence with which this book explores carbon pricing is admirable, reflecting that despite political reluctance it is a topic in all parts of the world.

_ Mikael Skou Andersen Aarhus University, Denmark and European Environment Agency. Environmental taxation and emissions trading continue to be high on the public policy agenda in many countries, and this is another welcome and very interesting volume in the *Critical Issues in Environmental Taxation* series that presents new ideas and evidence on these subjects from a wide range of countries and a variety of perspectives.

_ Paul Ekins University College London, UK. This original and timely volume provides unique insights and analysis on the pressing question of how to achieve environmental sustainability while fostering economic growth. The emphasis of the book lies in finding critical solutions to global climate change, including chapters on environmental fiscal reform and unemployment in Spain, EU structural and cohesion policy and sustainable development, ecological tax reform in Europe and Asia, Australia's carbon pricing mechanism and many other timely topics. This insightful volume will appeal to policy makers in government as well as academics and students in environmental law, environmental economics and environmental sustainability.
