basal metabolic rate

Welcome to your Basal Metabolic Rate! Your BMR indicates the calories your body needs per day to survive without moving. If you're awake and sitting, but not exercising, multiply that number by 1.2—the result is the amount of calories you need to maintain weight. To lose weight, you'll need to cut calories and increase exercise in order to maintain muscle mass. If you don't ingest enough calories for the day, you'll do more harm than good. In general, if you're trying to lose weight, aim for a loss of 1 to 2 pounds a week, no more.

Here's the formula:

Women: $BMR = 655 + (4.35 \times \text{weight in pounds}) + (4.7 \times \text{height in inches}) - (4.7 \times \text{age in years})$

Men: $BMR = 66 + (6.23 \times \text{weight in pounds}) + (12.7 \times \text{height in inches}) - (6.8 \times \text{age in years})$

based on a group of factors that coincide with the habits that govern your overall wellness. The loss of body fat pounds or the drop in body fat percentage are markers that are used to track wellness progress and direct fitness habits. Ideal body fat percentage is achieved primarily through correct eating habits including appropriate nutrition and a proper balance of aerobic strength power and endurance exercises. Dr. Vetere also highlights the need to drink plenty of water, get adequate rest, eliminate stress, and keep your nervous system functioning properly. The goal of this book is to get you to your ideal body fat by means of improving your overall wellness by implementing principles that are scientifically sound and align with the timeless biblical covenants that govern health. The purpose though will not be for personal vanity but to give glory to God, your Creator. The final chapter of the book is a forty-nine day journal to track your progress as you take Dr. Vetere's seven-week weight loss challenge.
