**Developing Essential Understanding of Algebraic Thinking for Teaching Mathematics in Grades 3-5** Maria L. Blanton, 2011 Like algebra at any level early algebra is a way to explore analyse represent and generalise mathematical ideas and relationships This book shows that children can and do engage in generalising about numbers and operations as their mathematical experiences expand The authors identify and examine five big ideas and associated essential understandings for developing algebraic thinking in grades 3 5 The big ideas relate to the fundamental properties of number and operations the use of the equals sign to represent equivalence variables as efficient tools for representing mathematical ideas quantitative reasoning as a way to understand mathematical relationships and functional thinking to generalise relationships between covarying quantities The book examines challenges in teaching learning and assessment and is interspersed with questions for teachers reflection *Planting the Seeds of Algebra, 3-5* Monica Neagoy, 2014-12-23 *Planting the Seeds of Algebra 3 5* will empower teachers with theoretical and practical knowledge about both the content and pedagogy of algebraic instruction and shows them the different faces of algebra as it appears in the early grades **Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds** Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development Some of the main threads running through the book are the various ways in which structures can express themselves in children s developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades *Planting the Seeds of Algebra, PreK-2* Monica Neagoy, 2012-04-20 The subject of algebra has always been important in American secondary mathematics education However algebra at the elementary level has been garnering increasing attention and importance over the past 15 years There is consequently a dire need for ideas suggestions and models for how best to achieve pre algebraic instruction in the elementary grades *Planting the Seeds of Algebra* will empower teachers with theoretical and practical knowledge about both the content and pedagogy of such instruction and show them the different faces of algebra as it appears in the early grades The book will walk teachers of young children through many examples of K 6 math lessons and unpack step by step the hidden connections to higher algebra After reading

this book teachers will be better equipped
