*Data-Driven Methods for Adaptive Spoken Dialogue Systems* Oliver Lemon, Olivier Pietquin, 2012-10-20 Data driven methods have long been used in Automatic Speech Recognition ASR and Text To Speech TTS synthesis and have more recently been introduced for dialogue management spoken language understanding and Natural Language Generation Machine learning is now present end to end in Spoken Dialogue Systems SDS However these techniques require data collection and annotation campaigns which can be time consuming and expensive as well as dataset expansion by simulation In this book we provide an overview of the current state of the field and of recent advances with a specific focus on adaptivity

*The Conversational Interface* Michael McTear, Zoraida Callejas, David Griol, 2016-05-19 This book provides a comprehensive introduction to the conversational interface which is becoming the main mode of interaction with virtual personal assistants smart devices various types of wearable and social robots The book consists of four parts Part I presents the background to conversational interfaces examining past and present work on spoken language interaction with computers Part II covers the various technologies that are required to build a conversational interface along with practical chapters and exercises using open source tools Part III looks at interactions with smart devices wearables and robots and discusses the role of emotion and personality in the conversational interface Part IV examines methods for evaluating conversational interfaces and discusses future directions

*Dynamic Neural Networks for Robot Systems: Data-Driven and Model-Based Applications* Long Jin, Predrag S. Stanimirovic, Sendren Sheng-Dong Xu, 2024-07-24 Neural network control has been a research hotspot in academic fields due to the strong ability of computation One of its widely applied fields is robotics In recent years plenty of researchers have devised different types of dynamic neural network DNN to address complex control issues in robotics fields in reality Redundant manipulators are no doubt indispensable devices in industrial production There are various works on the redundancy resolution of redundant manipulators in performing a given task with the manipulator model information known However it becomes knotty for researchers to precisely control redundant manipulators with unknown model to complete a cyclic motion generation CMG task to some extent It is worthwhile to investigate the data driven scheme and the corresponding novel dynamic neural network DNN which exploits learning and

control simultaneously Therefore it is of great significance to further research the special control features and solve challenging issues to improve control performance from several perspectives such as accuracy robustness and solving speed

**Big Data Management** Fausto Pedro García Márquez,Benjamin Lev,2016-11-15 This book focuses on the analytic principles of business practice and big data Specifically it provides an interface between the main disciplines of engineering technology and the organizational and administrative aspects of management serving as a complement to books in other disciplines such as economics finance marketing and risk analysis The contributors present their areas of expertise together with essential case studies that illustrate the successful application of engineering management theories in real life examples

**Conversational AI** Michael McTear,2022-05-31 This book provides a comprehensive introduction to Conversational AI While the idea of interacting with a computer using voice or text goes back a long way it is only in recent years that this idea has become a reality with the emergence of digital personal assistants smart speakers and chatbots Advances in AI particularly in deep learning along with the availability of massive computing power and vast amounts of data have led to a new generation of dialogue systems and conversational interfaces Current research in Conversational AI focuses mainly on the application of machine learning and statistical data driven approaches to the development of dialogue systems However it is important to be aware of previous achievements in dialogue technology and to consider to what extent they might be relevant to current research and development Three main approaches to the development of dialogue systems are reviewed rule based systems that are handcrafted using best practice guidelines statistical data driven systems based on machine learning and neural dialogue systems based on end to end learning Evaluating the performance and usability of dialogue systems has become an important topic in its own right and a variety of evaluation metrics and frameworks are described Finally a number of challenges for future research are considered including multimodality in dialogue systems visual dialogue data efficient dialogue model learning using knowledge graphs discourse and dialogue phenomena hybrid approaches to dialogue systems development dialogue with social robots and in the Internet of Things and social and ethical issues

**Dialogues with Social Robots** Kristiina Jokinen,Graham Wilcock,2016-12-23 This book explores novel aspects of social robotics spoken dialogue systems human robot interaction spoken language understanding multimodal communication and system evaluation It offers a variety of perspectives on and solutions to the most important questions about advanced techniques for social robots and chat systems Chapters by leading researchers address key research and development topics in the field of spoken dialogue systems focusing in particular on three special themes dialogue state tracking evaluation of human robot dialogue in social robotics and socio cognitive language processing The book offers a valuable resource for researchers and practitioners in both academia and industry whose work involves advanced interaction technology and who are seeking an up to date overview of the key topics It also provides supplementary educational material for courses on state of the art dialogue system technologies social robotics and related research fields
