Gallager, 1992 Based on an extremely popular short course conducted by the authors for several Fortune 500 companies this volume is designed to help professionals develop a deeper understanding of data networks and evolving integrated networks and to explore today's various analysis and design tools KEY TOPICS It begins with an overview of the principles behind data networks then develops an understanding of the modeling issues and mathematical analysis needed to compare the effectiveness of different networks An ideal reference for Communication Network and Research and Development Engineers

Data Networks Dimitri Bertsekas, Robert Gallager, 2021-10-02 This classic textbook aims to provide a fundamental understanding of the principles that underlie the design of data networks which form the backbone of the modern internet It was developed through classroom use at MIT in the 1980s and continues to be used as a textbook in MIT classes The present edition also contains detailed high quality solutions to all the end of chapter exercises Among its major features the book

- 1 Describes the principles of layered architectures
- 2 Explains the principles of data link control with many examples and insights into distributed algorithms and protocols
- 3 Provides an intuitive coverage of queueing and its applications in delay and performance analysis of networks
- 4 Covers the theory of multiaccess communications and local data networks
- 5 Discusses in depth theoretical and practical aspects of routing and topological design
- 6 Covers the theory of flow control emphasizing issues of congestion and delay in integrated high speed networks

Public Data Networks Josef Puzman, Boris Kubin, 2012-12-06 Public Data Networks provide a comprehensive survey of PDNs covering all major countries PDNs allow efficient and cost effective telecommunication between a terminal and computer or between computers regardless of who owns the data terminal The authors discuss the current state of and forthcoming developments in data communications using public telecommunication facilities Apart from the classical telecommunication networks telegraph and telephone public data networks provide the majority of data communication services worldwide The range of data services and user facilities has gradually expanded the quality of services improved and new services have appeared e g datafax teletex videotex message handling and teleconferencing The authors concentrate on PDN principles taking account of the latest CCITT recommendations and ISO standards Appendices and references provide detailed information for those working on PDNs at research design an implementation level Network digitalization and integration of networks and services have aided progress towards the integrated services digital network ISDN The ISDN uses advanced transmission and switching techniques to enhance the telecommunication services provided to its users An ISDN has much in common with the PDN as far as architecture methods of network management and functions are concerned but there are distinct differences in the methods of access and signalling The authors have extensive experience in data communication networking Dr Kubin is vice chairman of Study Group IX of the International Telegraph and Telephone Consultative Committee CCITT Dr Puzman is the Czechoslovak representative at Technical Commission 6 TC 6 of the

International Federation for Information Processing IFIP Public Data Networks is essential reading for researchers and designers of PDNs in universities and industry and provides important reference material for telecommunications and computer science students

High Performance Data Network Design Tony Kenyon, 2002-01-22 High Performance Data Network Design contains comprehensive coverage of network design performance and availability Tony Kenyon provides the tools to solve medium to large scale data network design problems from the ground up He lays out a practical and systematic approach that integrates network planning research design and deployment using state of the art techniques in performance analysis cost analysis simulation and topology modeling The proliferation and complexity of data networks today is challenging our ability to design and manage them effectively A new generation of Internet e commerce and multimedia applications has changed traditional assumptions on traffic dynamics and demands tight quality of service and security guarantees These issues combined with the economics of moving large traffic volumes across international backbones mean that the demands placed on network designers planners and managers are now greater than ever before High Performance Data Network Design is a must have for anyone seriously involved in designing data networks Together with the companion volume Data Networks Routing Security and Performance Optimization this book gives readers the guidance they need to plan implement and optimize their enterprise infrastructure Provides real insight into the entire design process Includes basic principles practical advice and examples of design for industrial strength enterprise data networks Integrates topics often overlooked backbone optimization bottleneck analysis simulation tools and network costing

Network Optimization Panos M. Pardalos, Donald W. Hearn, William W. Hager, 1997-04-17 Network optimization is important in the modeling of problems and processes from such fields as engineering computer science operations research transportation telecommunication decision support systems manufacturing and airline scheduling Recent advances in data structures computer technology and algorithm development have made it possible to solve classes of network optimization problems that until recently were intractable The refereed papers in this volume reflect the interdisciplinary efforts of a large group of scientists from academia and industry to model and solve complicated large scale network optimization problems
