Philippines,2007 **Time-Varying Network Optimization** Dan Sha,C. K. Wong,2007-05-05 Network flow optimization
problems may arise in a wide variety of important fields such as transportation telecommunication computer networking
financial planning logistics and supply chain management energy systems etc Significant and elegant results have been
achieved on the theory algorithms and applications of network flow optimization in the past few decades See for example the
seminal books written by Ahuja Magnanti and Orlin 1993 Bazaraa Jarvis and Sherali 1990 Bertsekas 1998 Ford and
Fulkerson 1962 Gupta 1985 Iri 1969 Jensen and Barnes 1980 Lawler 1976 and Minieka 1978 Most network optimization
problems that have been studied up to date are however static in nature in the sense that it is assumed that it takes zero time
to traverse any arc in a network and that all attributes of the network are constant without change at any time Networks in
the real world are nevertheless time varying in essence in which any flow must take a certain amount of time to traverse an
arc and the network structure and parameters such as arc and node capacities may change over time In such a problem how
to plan and control the transmission of flow becomes very important since waiting at a node or travelling along a particular arc
with different speed may allow one to catch the best timing along his path and therefore achieve his overall objective such as
a minimum overall cost or a minimum travel time from the origin to the destination
