**Data Networks** Dimitri Bertsekas, Robert Gallager, 2021-10-02 This classic textbook aims to provide a fundamental understanding of the principles that underlie the design of data networks which form the backbone of the modern internet. It was developed through classroom use at MIT in the 1980s and continues to be used as a textbook in MIT classes. The present edition also contains detailed high quality solutions to all the end of chapter exercises. Among its major features the book 1 Describes the principles of layered architectures 2 Explains the principles of data link control with many examples and insights into distributed algorithms and protocols 3 Provides an intuitive coverage of queueing and its applications in delay and performance analysis of networks 4 Covers the theory of multiaccess communications and local data networks 5 Discusses in depth theoretical and practical aspects of routing and topological design 6 Covers the theory of flow control emphasizing issues of congestion and delay in integrated high speed networks *Control Systems Functions and Programming Approaches* by Dimitris N Chorafas , 1966-01-01 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems. A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory. As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression. Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering *Control Systems Functions and Programming Approaches: Applications by Dimitris N Chorafas* , 1966-01-01 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems.
