### Parent Functions and Transformations

**Parent Graphs** The parent graph, which is the graph of the parent function, is the simplest of the graphs in a family. Each graph in a family of graphs has similar characteristics.

| Name                    | Characteristics                | Parent Function                      |
|-------------------------|--------------------------------|--------------------------------------|
| Constant Function       | Straight horizontal line       | $y = a$ , where $a$ is a real number |
| Linear Function         | Straight diagonal line         | Identity Function $y = x$            |
| Absolute Value Function | Diagonal lines shaped like a V | $y =  x $                            |
| Quadratic Function      | Curved like a parabola         | $y = x^2$                            |

**Example:** Identify the type of function represented by each graph.

The graph is a diagonal line. The graph represents a linear function.

The graph is a parabolic curve. The graph represents a quadratic function.

#### Exercises
