

Do not expose the charger to rain or snow.
Push by the plug rather than the cord when disconnecting the charger. This will reduce the risk of damage to the electric plug and cord.
Make sure the cord is secured so that it will not be stepped on, tripped over or otherwise subjected to damage or stress.
Do not use an extension cord unless it is absolutely necessary. Use of improper extension cord could result in risk of shock or electric shock or fire.
When operating a charger outdoors, always provide a dry location and use an extension cord suitable for outdoor use.
Any extension cord must have adequate wire size (AWG or American Wire Gauge) for safety. The smaller the gauge number of the wire, the greater the capacity of the cable, that is, the more power it can carry. A cable with a smaller gauge number has a higher capacity, resulting in less power and overheating. When using more than one extension to make up a cable, use the next heavier gauge. The chart below shows the correct size to use depending on cord length and nameplate ampere rating. If in doubt, use the next heavier gauge.

Chargers
This is a DEWALT charger. Be sure to read all safety instructions before using your charger. Consult the chart at the end of this manual for compatibility of chargers and battery packs.

Charging Procedure (Fig. 3)

1. Insert the battery pack (H) into the charger, as shown in Figure 3, making sure the pack is fully seated. The charger's red light will indicate.
2. The completion of charge will be indicated by the red light remaining OFF continuously. The pack is fully charged and may be used at this time or left in the charger.

LEAVING THE BATTERY PACK IN THE CHARGER

The charger and battery pack can be left connected with the charge indicator showing. The weak battery packs: Weak batteries will continue to function but should not be expected to perform at much work.

FAULTY BATTERY PACKS: This charger will not charge a faulty battery pack.

NOTE: This could also mean a problem with a charger.

Important Charging Notes

1. Longest life and best performance can be obtained if the battery pack is charged when the air temperature is between 60°F (15.5°C) and 75°F (24°C). DO NOT charge the battery pack in an air temperature below +40°F (+4.5°C) or above +105°F (+40.5°C). This is important and will affect the life of the battery pack.
2. The charger and battery pack may become warm to the touch while charging. This is a normal condition. Do not touch the battery pack or charger if they are warm. Avoid placing the charger or battery pack in a warm environment such as in a metal shed or an unventilated room.
3. A cold battery pack will charge at about half the rate of a warm battery pack. The battery pack will charge at normal rate through the entire charging cycle and will not return to maximum charge rate even if the battery pack warms.
4. If the battery pack does not charge properly:
5. Check operation receptacle for plugging in a lamp or other appliance.
6. Check to see if receptacle is connected to a light switch which turns power off when you turn the switch off.
7. Move the charger and battery pack to a location where the surrounding air temperature is approximately 65°F (18.3°C) to 75°F (24°C).
8. Check the procedure for using the tool. Battery pack and charger to your local service center.
9. The battery pack should be recharged when it fails to produce sufficient power on jobs which were easily done previously. DO NOT CONTINUE to use under these conditions. Follow the instructions for recharging the battery pack.
10. Do not touch the battery pack, but not limited to grinding dust, metal chips, steel, iron, aluminum foil, or any buildup of metallic particles should be kept away from charger contacts. Always unplug the charger from the power supply when there is no battery pack in the charger.
11. Do not immerse or immerse the charger in water or any other liquid.
12. Do not touch the charger or battery pack after the charger. Electric shock may result.

WARNING: Burn hazard. Never attempt to open the battery pack for any reason. If the plastic housing of the battery pack breaks or cracks, return to a service center for recycling.

Storage Recommendations

1. For best storage place is one that is cool and dry, away from direct sunlight and excess heat or cold.
2. For long storage, it is recommended to store a fully charged battery pack in a cool dry place out of direct sunlight.

NOTE: Battery packs should not be stored completely depleted of charge. The battery pack will need to be recharged before use.

Variable Speed Trigger Switch (Fig. 1)

To turn the tool on, squeeze the trigger switch (A). To turn the tool off, release the trigger switch. To turn the tool on, squeeze the trigger switch (A). To turn the tool off, release the trigger switch.

Forward/Reverse Control Button (Fig. 1)

A. Forward/reverse control button (B) determines the rotational direction of the tool and also serves as a lock button. To select forward rotation, release the trigger switch and depress the forward/reverse control button on the right side of the tool.

To select reverse rotation, depress the forward/reverse control button on the left side of the tool. The center position of the control button locks the tool in the off position. When changing the direction of rotation, the tool will stop for a moment before changing direction.

NOTE: The first time the tool is run after changing the direction of rotation, you may hear a click or rattle. This is normal and does not indicate a problem.

Torque Adjustment Collar (Fig. 1)

Your tool has an adjustable torque control mechanism for driving and removing a wide array of fastener shapes and sizes. Turning the collar (C) shows numbers and a drill bit symbol. These numbers correspond to the torque settings. The higher the number, the higher the torque. To select a torque setting, turn the collar (C) to the desired number. To select any of the numbers, rotate until the desired number is visible.

Dual Range Gearing (Fig. 1)

The dual range feature of your drill/driver allows you to shift gears for greater versatility.
1. To select high torque settings, turn the tool off and permit it to stop. Slide the gear shifter (D) forward towards the chuck.
2. To select low torque settings, turn the tool off and permit it to stop. Slide the gear shifter (D) back away from the chuck.

NOTE: Do not change gears when the tool is running. Always allow the drill to come to a complete stop before changing gears. If you are having trouble, make sure that the dual range gear shifter is either completely pushed forward or completely pushed back.

Worklight (Fig. 1)

The worklight is located just above the trigger switch (A). The worklight is actuated when the trigger switch is depressed, and will automatically turn off 20 seconds after the trigger switch is released. If the trigger switch remains depressed, the worklight will remain on.
NOTE: The worklight is for lighting the immediate work surface and is not intended to be used as a flashlight.

1. Turn tool off and disconnect tool from power source.
2. Place the sleeve chuck with one hand and use the other hand to secure the tool.
3. Rotate the sleeve counterclockwise far enough to accept the desired accessory.
4. Place the accessory about 3/4" (19 mm) into the chuck and tighten by rotating the chuck sleeve clockwise with one hand while holding the tool with the other. Your tool is equipped with an automatic spindle lock mechanism. This allows you to open and close the chuck with one hand.
Be sure to tighten chuck with one hand on the chuck sleeve and one hand holding the tool for rotation. To release the accessory, repeat steps 1 and 2 above.

OPERATION

To reduce the risk of serious personal injury, turn tool off and remove the battery pack before making any adjustments or removing/installing attachments or accessories. An accidental start-up can cause injury.

Installing and Removing the Battery Pack (Fig. 2)

NOTE: For best results, make sure your battery pack is fully charged.
To install the battery pack (H) into the tool handle, align the battery pack with the rails inside the tool's handle and slide it into the handle until the battery pack is firmly seated in the tool and ensure that it does not disengage.
To remove the battery pack from the tool, press the release button (G) and firmly pull the battery pack out of the tool handle. Insert it into the charger as described in the charger section of this manual.

Drilling (Fig. 7)

1. Select the desired speed/torque range using the gear shifter to match the speed and torque to the planned operation. Turn the collar (C) to the drill symbol.
2. Use sharp drill bits only.
3. Always apply pressure in a straight line with the bit. Use enough pressure to keep drill going, but do not push hard enough to stall the motor or deflect the bit.
4. Hold tool firmly with both hands to control the twisting action of the drill. If model is not equipped with a grip, drill with one hand on the handle and one hand on the battery pack.
5. **WARNING:** Drill may stall if overloaded causing a sudden twist. Always expect the stall. Grip the drill firmly with both hands to control the twisting action of the drill. If model is not equipped with a grip, drill with one hand on the handle and one hand on the battery pack.
6. **IF DRILL STALLS,** it is usually because it is being overloaded or improperly used. **RELEASE TRIGGER IMMEDIATELY,** remove one hand from work, and determine cause of stall. **DO NOT DEPRESS TRIGGER ON AND OFF IN AN ATTEMPT TO START A STALLED DRILL.** — THIS CAN DAMAGE THE DRILL.
7. When the motor running when pulling the bit back out of a drilled hole. This will help prevent jamming.

Screwdriving (Fig. 8)

1. Select the desired speed/torque range using the gear shifter to match the speed and torque to the planned operation.
2. Turn the torque adjustment collar (C) to the desired position.
3. **NOTE:** Use the lowest torque setting required to drive the fastener at the desired depth. The lower the number, the lower the torque output.
4. Insert the desired fastener into the keyless chuck as you would any drill bit.
5. Make some practice runs in scrap or on unseen areas of the workpiece to determine the proper position of the torque adjustment collar.
6. When using or creating through the material, reduce pressure on drill and ease the bit through the fast fractional part of the hole.
7. When the motor running when pulling the bit back out of a drilled hole. This will help prevent jamming.

MAINTENANCE
To reduce the risk of serious personal injury, turn tool off and remove the battery pack before making any adjustments or removing/installing attachments or accessories. An accidental start-up can cause injury.
