Shaping the College Curriculum Lisa R. Lattuca, Joan S. Stark, 2011-01-11 *Shaping the College Curriculum* focuses on curriculum development as an important decision making process in colleges and universities The authors define curriculum as an academic plan developed in a historical social and political context They identify eight curricular elements that are addressed intentionally or unintentionally in developing all college courses and programs By exploring the interaction of these elements in context they use the academic plan model to clarify the processes of course and program planning enabling instructors and administrators to ask crucial questions about improving teaching and optimizing student learning This revised edition continues to stress research based educational practices The new edition consolidates and focuses discussion of institutional and sociocultural factors that influence curricular decisions All chapters have been updated with recent research findings relevant to curriculum leadership accreditation assessment and the influence of academic fields while two new chapters focus directly on learning research and its implications for instructional practice A new chapter drawn from research on organizational change provides practical guidance to assist faculty members and administrators who are engaged in extensive program improvements Streamlined yet still comprehensive and detailed this revised volume will continue to serve as an invaluable resource for individuals and groups whose work includes planning designing delivering evaluating and studying curricula in higher education This is an extraordinary book that offers not a particular curriculum or structure but a comprehensive approach for thinking about the curriculum ensuring that important considerations are not overlooked in its revision or development and increasing the likelihood that students will learn and develop in ways institutions hope they will The book brings coherence and intention to what is typically an unstructured haphazard and only partially rational process guided more by beliefs than by empirically grounded substantive information Lattuca and Stark present their material in ways that are accessible and applicable across planning levels course program department and institution local settings and academic disciplines It is an admirable and informative marriage of scholarship and practice and an insightful guide to both Anyone who cares seriously about how we can make our colleges and universities more educationally effective should read this book Patrick T Terenzini distinguished professor and senior scientist Center for the Study of Higher Education The Pennsylvania State University *Conducting Educational Design*

Research Susan McKenney, Thomas C Reeves, 2013-06-19 Among the wide variety of backgrounds many of those active in defining and applying educational design research appear to have arrived through an interest in psychology the learning sciences or instructional design Although most design studies are carried out in multi disciplinary teams participants need to conceptually understand the marriage between the design discipline and scientific research traditions Conducting Educational Design Research emphasises the application of design knowledge and skills in research programs guiding readers through the various disciplinary backgrounds and scientific developments current today Therefore this book on design research will be especially useful for faculty and students in a graduate education programs where exposure to research methodologies is strong but exposure to design methodologies is limited and b graduate programs in instructional design where participants have strong backgrounds in design but may lack the scientific research orientation In a time when design research is gaining momentum it seems notable that educational research programs are being confronted with the randomized field trials movement and educational design programs are at risk of diluting their design character as valuable curricular time is being usurped by more traditional research skills This book not only offers an invaluable classroom resource it also provides for the ongoing university dialogue on how to best prepare the next generation of educational researchers Provided by publisher **The Sage Handbook of Higher Education Instructional Design** Safary

Motivational Immediacy in the Workplace Jonathan E. Taylor, 2022-05-02 Learners are always motivated they just may not be motivated to learn the things you are wanting them to learn Motivational Immediacy refers to the moment by

moment motivation of learners during a learning event This is in contrast to typical global views of motivation and while casting a much heavier burden on the instructor brings with it more deep meaningful and permanent learning Motivational Immediacy in the Workplace focuses not only on fostering learner engagement with a primary emphasis on the role of the instructor but also addresses the work and concerns of curriculum writers and training directors The author defines Motivational Immediacy as both a phenomenon and a practice and provides concrete steps for practical action Motivational Immediacy as a construct refers to a moment by moment feeling of motivation on the part of the learner to engage in the learning opportunity directly at hand As a practice it is the instructor s process of working to stay connected with individual learners and foster engagement consistently at every moment of the teaching activity The author addresses this idea from a learner centered orientation making the case that understanding and empathizing with the learner s perceptions is the most effective way to promote efficient meaningful learning The book will provide a comprehensive conceptualization of learning engagement and learning resistance It begins with a substantial theoretical framework and then shifts to direct applications to practice in the workplace Motivational Immediacy is multidisciplinary and draws from fields such as Adult Education Workplace and Training Development Psychology Educational Psychology Sociology Cultural Anthropology and Communications
