Laminated Composite Doubly-Curved Shell Structures Francesco Tornabene, Michele Baccocchi, Nicholas Fantuzzi, Erasmo Viola, 2016-05-17 The title Laminated Composite Doubly Curved Shell Structures Differential and Integral Quadrature Strong Form Finite Elements illustrates the theme treated and the prospective followed during the composition of the present work The aim of this manuscript is to analyze the static and dynamic behavior of thick and moderately thick composite shells through the application of the Differential Quadrature DQ method The book is divided into two volumes wherein the principal higher order structural theories are illustrated in detail and the mechanical behavior of doubly curved structures are presented by several static and dynamic numerical applications In particular the first volume is mainly theoretical whereas the second one is mainly related to the numerical DQ technique and its applications in the structural field The numerical results reported in the present volume are compared to the one available in the literature but also to the ones obtained through several codes based on the Finite Element Method FEM Furthermore an advanced version of the DQ method termed Strong Formulation Finite Element Method SFEM is presented The SFEM solves the differential equations inside each element in the strong form and implements the mapping technique typical of the FEM Mechanics of laminated Composite doubly-curved shell structures Francesco Tornabene, Nicholas Fantuzzi, 2014-03-01 This manuscript comes from the experience gained over ten years of study and research on shell structures and on the Generalized Differential Quadrature method The title Mechanics of Laminated Composite Doubly Curved Shell Structures illustrates the theme followed in the present volume The present study aims to analyze the static and dynamic behavior of moderately thick shells made of composite materials through the application of the Differential Quadrature DQ technique A particular attention is paid other than fibrous and laminated composites also to Functionally Graded Materials FGMs They are non homogeneous materials characterized by a continuous variation of the mechanical properties through a particular direction The GDQ numerical solution is compared not only with literature results but also with the ones supplied and obtained through the use of different structural codes based on the Finite Element Method FEM Furthermore an advanced version of GDQ method is also presented This methodology is termed Strong Formulation Finite Element Method SFEM because it employs the strong form of the differential system of equations at the master element level and the mapping technique proper of FEM The connectivity between two elements is enforced through compatibility conditions **Recent Advances in Theoretical, Applied, Computational and Experimental Mechanics** B. N. Singh, Arnab Roy, Dipak Kumar Maiti, 2020-04-03 This volume contains selected papers presented at the 7th International Conference on Theoretical Applied Computational and Experimental Mechanics The papers come from diverse disciplines such as aerospace civil mechanical and reliability engineering physics and navel architecture The contents of this volume focus on different aspects of mechanics namely fluid mechanics solid mechanics flight mechanics control and propulsion This volume will be of use to
