## Commutative Algebra Elements Of Mathematics:

**Commutative Algebra** N. Bourbaki, 1998-08-03 This is the English translation of the first seven chapters of Bourbaki's *Algebra commutative*. It provides a treatment of commutative algebra seeking to enable the reader to go on and study algebraic or arithmetic geometry.

**Algebra II** N. Bourbaki, 2013-12-01 This is a softcover reprint of the English translation of 1990 of the revised and expanded version of Bourbaki's *Algebra* Chapters 4 to 7. This completes *Algebra I* to 3 by establishing the theories of commutative fields and modules over a principal ideal domain. Chapter 4 deals with polynomials, rational fractions and power series. A section on symmetric tensors and polynomial mappings between modules and a final one on symmetric functions have been added. Chapter 5 was entirely rewritten. After the basic theory of extensions, prime fields, algebraically closed radical extension, separable algebraic extensions are investigated, giving way to a section on Galois theory. Galois theory is in turn applied to finite fields and abelian extensions. The chapter then proceeds to the study of general non algebraic extensions which cannot usually be found in textbooks:  $p$ -bases, transcendental extensions, separability criteria, regular extensions. Chapter 6 treats ordered groups and fields and based on it is Chapter 7: modules over a PID, studies of torsion modules, free modules, finite type modules with applications to abelian groups and endomorphisms of vector spaces. Sections on semi-simple endomorphisms and Jordan decomposition have been added. Chapter IV: Polynomials and Rational Fractions. Chapter V: Commutative Fields. Chapter VI: Ordered Groups and Fields. Chapter VII: Modules Over Principal Ideal Domains.

*Algèbres commutative: Dimension* Nicolas Bourbaki, 1989-01 This is the softcover reprint of the English translation of 1972 available from Springer since 1989 of the first 7 chapters of Bourbaki's *Algebra commutative*. It provides a very complete treatment of commutative algebra enabling the reader to go further and study algebraic or arithmetic geometry. The first 3 chapters treat in succession the concepts of flatness, localization and completions in the general setting of graduations and filtrations. Chapter 4 studies associated prime ideals and the primary decomposition. Chapter 5 deals with integers, integral closures and finitely generated algebras over a field including the Nullstellensatz. Chapter 6 studies valuation of any rank and the last chapter focuses on divisors, Krull, Dedekind or factorial domains with a final section on modules over integrally closed Noetherian domains not usually found in textbooks. Useful exercises appear at the ends of the chapters.
