Compactifications Of Symmetric And Locally Symmetric Spaces Mathematics Theory Applications:

Compactifications of Symmetric and Locally Symmetric Spaces Armand Borel, Lizhen Ji, 2005-12-08 Introduces uniform constructions of most of the known compactifications of symmetric and locally symmetric spaces with emphasis on their geometric and topological structures Relatively self contained reference aimed at graduate students and research mathematicians interested in the applications of Lie theory and representation theory to analysis number theory algebraic geometry and algebraic topology

Compactifications of Symmetric and Locally Symmetric Spaces Armand Borel, Lizhen Ji, 2006-07-25 Noncompact symmetric and locally symmetric spaces naturally appear in many mathematical theories including analysis representation theory nonabelian harmonic analysis number theory automorphic forms algebraic geometry modular and algebraic topology cohomology of discrete groups In most applications it is necessary to form an appropriate compactification of the space The literature dealing with such compactifications is vast The main purpose of this book is to introduce uniform constructions of most of the known compactifications with emphasis on their geometric and topological structures The book is divided into three parts Part I studies compactifications of Riemannian symmetric spaces and their arithmetic quotients Part II is a study of compact smooth manifolds Part III studies the compactification of locally symmetric spaces Familiarity with the theory of semisimple Lie groups is assumed as is familiarity with algebraic groups defined over the rational numbers in later parts of the book although most of the pertinent material is recalled as presented Otherwise the book is a self contained reference aimed at graduate students and research mathematicians interested in the applications of Lie theory and representation theory to diverse fields of mathematics , *Locally Mixed Symmetric Spaces* Bruce Hunt, 2021-09-04 What do the classification of algebraic surfaces Weyl's dimension formula and maximal orders in central simple algebras have in common All are related to a type of manifold called locally mixed symmetric spaces in this book The presentation emphasizes geometric concepts and relations and gives each reader the roter Faden starting from the basics and proceeding towards quite advanced topics which lie at the intersection of differential and algebraic geometry algebra and topology Avoiding technicalities and assuming only a working knowledge of real Lie groups the text provides a wealth of examples of symmetric spaces The last two chapters deal with one particular case Kuga fiber spaces and a generalization elliptic surfaces both of which require some knowledge of algebraic geometry Of interest to topologists differential or algebraic geometers working in areas related to arithmetic groups the book also offers an introduction to the ideas for non experts

Ergodic Theory and Dynamical Systems in their Interactions with Arithmetics and Combinatorics Sébastien Ferenczi, Joanna Kułaga-Przymus, Mariusz

Lemańczyk, 2018-06-15 This book concentrates on the modern theory of dynamical systems and its interactions with number theory and combinatorics The greater part begins with a course in analytic number theory and focuses on its links with ergodic theory presenting an exhaustive account of recent research on Sarnak's conjecture on Möbius disjointness Selected topics involving more traditional connections between number theory and dynamics are also presented including equidistribution homogenous dynamics and Lagrange and Markov spectra In addition some dynamical and number theoretical aspects of aperiodic order some algebraic systems and a recent development concerning tame systems are described

Geometry, Algebra, Number Theory, and Their Information Technology Applications Amir

Akbary, Sanoli Gun, 2018-09-18 This volume contains proceedings of two conferences held in Toronto Canada and Kozhikode India in 2016 in honor of the 60th birthday of Professor Kumar Murty The meetings were focused on several aspects of number theory The theory of automorphic forms and their associated L functions Arithmetic geometry with special emphasis on algebraic cycles Shimura varieties and explicit methods in the theory of abelian varieties The emerging applications of number theory in information technology Kumar Murty has been a substantial influence in these topics and the two conferences were aimed at honoring his many contributions to number theory arithmetic geometry and information technology

New Trends in Geometric Analysis Antonio Alarcón, Vicente Palmer, César Rosales, 2023-10-18 The aim of this book is to provide an overview of some of the progress made by the Spanish Network of Geometric Analysis REAG by its Spanish acronym since its born in 2007 REAG was created with the objective of enabling the interchange of ideas and the knowledge transfer between several Spanish groups having Geometric Analysis as a common research line This includes nine groups at Universidad Aut noma de Barcelona Universidad Aut noma de Madrid Universidad de Granada Universidad Jaume I de Castell n Universidad de Murcia Universidad de Santiago de Compostela and Universidad de Valencia The success of REAG has been substantiated with regular meetings and the publication of research papers obtained in collaboration between the members of different nodes On the occasion of the 15th anniversary of REAG this book aims to collect some old and new contributions of this network to Geometric Analysis The book consists of thirteen independent chapters all of them authored by current members of REAG The topics under study cover geometric flows constant mean curvature surfaces in Riemannian and sub Riemannian spaces integral geometry potential theory and Riemannian geometry among others Some of these chapters have been written in collaboration between members of different nodes of the network and show the fruitfulness of the common research atmosphere provided by REAG The rest of the chapters survey a research line or present recent progresses within a group of those forming REAG Surveying several research lines and offering new directions in the field the volume is addressed to researchers including postdocs and PhD students in Geometric Analysis in the large

Compactifications Of Pel-type Shimura Varieties And Kuga Families With Ordinary Loci Kai-wen Lan, 2017-07-21

This book is a comprehensive treatise on the partial toroidal and minimal compactifications of the ordinary loci of PEL type Shimura varieties and Kuga families and on the canonical and subcanonical extensions of automorphic bundles. The results in this book serve as the logical foundation of several recent developments in the theory of p -adic automorphic forms and of the author's work with Harris, Taylor and Thorne on the construction of Galois representations without any polarizability conditions, which is a major breakthrough in the Langlands program. This book is important for active researchers and graduate students who need to understand the above mentioned recent works and is written with such users of the theory in mind, providing plenty of explanations and background materials which should be helpful for people working in similar areas. It also contains precise internal and external references and an index of notation and terminologies. These are useful for readers to quickly locate materials they need.
