Ang, Norwina Binti Mohd Nawawi**

Compact City Series Achieving Sustainable Urban Form:

Compact Cities Rod Burgess, Mike Jenks, 2002-09-11 This new book examines and evaluates the merits and defects of compact city approaches in the context of developing countries in Africa Asia and Latin America **Achieving Sustainable Urban Form** Elizabeth Burton, Mike Jenks, Katie Williams, 2013-07-04 Achieving Sustainable Urban Form represents a major advance in the sustainable development debate It presents research which defines elements of sustainable urban form density size configuration detailed design and quality from macro to micro scale Case studies from Europe the USA and Australia are used to illustrate good practice within the fields of planning urban design and architecture **Compact Cities** Rod Burgess, Mike Jenks, 2003-09-01 This collection of edited papers forms part of the Compact City Series creating a companion volume to *The Compact City* 1996 and *Achieving Sustainable Urban Form* 2000 and extends the debate to developing countries This book examines and evaluates the merits and defects of compact city approaches in the context of developing countries in Africa Asia and Latin America Issues of theory policy and practice relating to sustainability of urban form are examined by a wide range of international academics and practitioners **Archispeak** Tom Porter, 2004-08-02 Widely used in architectural circles in the heat of discussion the recurrent use of particular words and terms has evolved into a language of design jargon Commonly found in architectural literature and journalism in critical design debate and especially in student project reviews Archispeak can seem insular and perplexing to others and particularly to the new architectural student often incomprehensible There is a need to translate architectural design concepts into spoken and written commentary each word in use embodying a precise and universally accepted architectural meaning If we explore the vocabulary of this language we gain insight into good design practice and into collective understanding of what constitutes a refined architecture This unique illustrated guide will help students understand the nuances of this specialized language and help them in communicating their own design ideas *Achieving Sustainable Mobility* Mr Erling Holden, 2012-11-28 Sustainable mobility has become the new imperative for transport policy There have been a number of policy attempts at sustainable mobility globally such as the development of more efficient conventional transport technologies the promotion of efficient and affordable public transport systems and the encouragement of environmental awareness Such policies have so often been presented as prerequisites for sustainable mobility that they are now taken for granted But are any of these policies really successful To what extent do they actually contribute or fail to contribute to sustainable mobility Why do some policies succeed and others fail Using an interdisciplinary approach which brings together various theories and methodologies this book tests each of these policies or hypotheses as the author sees them with detailed empirical investigations It also argues that leisure time travel should be included in any sustainable mobility policies as it now accounts for 50 per cent of all annual travel distance in developed countries The book concludes by suggesting fourteen theses of sustainable mobility for the EU and a new model for future best practice **Sustainable Resilient Built Environments**

Rama Devi Nandineni, Susan Ang, Norwina Binti Mohd Nawawi, 2024-07-05 The proceedings of Sustainable Resilient Built Environments are based on the SRBE 2022 conference held in December 2022. It focuses on the advances under the overarching theme of Sustainability. The concept of Sustainability has been conventionally defined as meeting the needs of the present without compromising the ability of future generations to meet their own needs. In scientific literature, sustainable development has been analysed using different qualitative approaches such as economic, social, ecological, cultural, institutional, ethical, and political. In this edited volume, the concepts of both sustainability and resilience are considered to open up useful pathways towards achieving sustainable buildings and infrastructure. Though the concepts of sustainability and resilience are considered to help improve the built environment, the interrelations and interdependence between these two concepts are not clearly evident. This has led to the questions such as: Is the sustainable built environment always resilient? Is the resilient built environment always sustainable? What more is needed for sustainability? In exploring these pertinent questions, the proposed edited volume is expected to unveil and disseminate new insights on the themes related to sustainable and resilient built environment. The themes of the proceedings lay a platform for researchers and professionals to integrate the aspects including smart innovation, technologies, green energy, efficiency, carbon reduction, sustainability, and resilience with regard to buildings and other built infrastructure. Specific objectives included as per the five themes are as follows: Environment, Design and Sustainability, Sustainable Smart Buildings, Community Resilience, Social Sustainability, Heritage and Sustainability, Pandemic issues, and sustainable development. **Building a Compact City**

Meng Wang, 2022-01-18 This book serves as a solid ground for seeking strategies to build the compact city that situated in a specific local area based on the systematic examination of the effects of spatial planning system on urbanization control. Furthermore, the critical problems in the urban planning process are revealed and the possible approaches to improve the local planning system toward effectively promoting more compact development are discussed. This book also provides a comprehensive picture for understanding the mutual influences between the planning, its implementation, and urban developments, particularly in the context of cities of western China while these cities are experiencing dramatic urban growth in recent years but walking into a quite different development path comparing to the eastern mega cities. In nearly two decades, government officials, professional planners, scholars of urban studies, citizens who concern sustainable development are talking about the compact city, a promising vision for sustaining our growing or shrinking cities. Abundance of debates fall on the images, measurement, and strengths of the compact city while the substantializing of the vision in a specific city has been barely explored. The Sustainable City X C.A. Brebbia, W.F. Florez-Escobar, 2015-09-01 Containing the proceedings of the 10th International Conference on Urban Regeneration and Sustainability, this book addresses the multidisciplinary aspects of urban planning, a result of the increasing size of cities, the amount of resources and services required, and the complexity of modern society. Most of earth's population now lives in cities and the process of urbanisation continues.

generating many problems deriving from the drift of the population towards them These problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the quality and standard of living The process however faces a number of major challenges related to reducing pollution improving main transportation and infrastructure systems New urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment i e reduction in air water and soil pollution as well as efficient ways to deal with waste generation These challenges contribute to the development of social and economic imbalances and require the development of new solutions Large cities are probably the most complex mechanisms to manage However despite such complexity they represent a fertile ground for architects engineers city planners social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements The challenge of planning sustainable cities lies in considering their dynamics the exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems Topics covered include Urban Strategies Planning Development and Management Urban Conservation and Regeneration The Community and the City Eco town Planning Landscape Planning and Design Environmental Management Sustainable Energy and the City Transportation Quality of Life Architectural Issues Cultural Heritage Issues Intelligent Environment and Emerging Technologies Planning for Risk Disaster and Emergency Response Safety and Security Waste Management Infrastructure and Society Urban Metabolism

Urban Planning and Design for Megacities in the Global South Mohammed Firoz C,Bharat Dahiya,Lakshmi Priya Rajendran,Lalit Kumar Dashora,Uday Chatterjee,2025-01-31 This anthology Urban Planning and Design for Megacities in the Global South Smart and Sustainable Development sheds light on the intricate dynamics of megacity growth in the Global South It has compiled a rich and diverse array of evidence based case studies fostering discussions on emerging issues strategies and solutions for the enhanced planning and development of megacities in the Global South By delving into the underlying factors propelling this rapid urban expansion such as economic opportunities rural to urban migration and natural population growth this volume analyzes the complex interplay of socio economic environmental and political forces shaping city regional landscapes Examining the growth of megacities offers invaluable insights into the challenges and opportunities associated with urbanization in the 21st century Furthermore some cities that have not yet achieved megacity status have also been included in this book to provide a comprehensive understanding of urban growth dynamics and the related factors influencing this growth By studying these rapidly expanding cities their challenges in urban planning and policy implementation can be identified These challenges often include inadequate infrastructure insufficient public services environmental degradation and socio economic disparities In response using case studies the book presents conceptual and empirical strategies to tackle the various problems faced by megacities of the Global South

Spatial Planning and Sustainable Development Mitsuhiro Kawakami,Zhen-jiang Shen,Jen-te Pai,Xiao-lu Gao,Ming Zhang,2013-02-28 This book

attempts to provide insights into the achievement of a sustainable urban form through spatial planning and implementation here we focus on planning experiences at the levels of local cities and some metropolitan areas in Asian countries This book investigates the impact of planning policy on spatial planning implementation from multidisciplinary viewpoints encompassing land use patterns housing development transportation green design and agricultural and ecological systems in the urbanization process We seek to learn from researchers in an integrated multidisciplinary platform that reflects a variety of perspectives such as economic development social equality and ecological protection with a view to achieving a sustainable urban form
