Quantum Control of Multi-Wave Mixing Yanpeng Zhang, Feng Wen, Min Xiao, 2013-07-17 Multi wave mixing gives rise to new frequency components due to the interaction of light signals with a suitable nonlinear medium In this book a systematic framework for the control of these processes is used to lead readers through a plethora of related effects and techniques

Advances in Multi-photon Processes and Spectroscopy Robert J. Gordon, Y. Fujimura, 2000 In view of the rapid growth in both experimental and theoretical studies of multi photon processes and multi photon spectroscopy of atoms ions and molecules in chemistry physics biology materials science etc it is desirable to publish an advanced series of volumes containing review papers that can be read not only by active researchers in these areas but also by those who are not experts but who intend to enter the field The present series aims to serve this purpose Each review article is written in a self contained manner by the expert s in the area so that the reader can grasp the knowledge without too much preparation

Semiconductor Optics 2 Heinz Kalt, Claus F. Klingshirn, 2024-03-16 This book provides an introduction to and an overview

of the multifaceted area of dynamics and nonlinearities related to optical excitations in semiconductors. It is a revised and significantly extended edition of the well established book by C. Klingshirn, split into two volumes and restructured to make it more concise. Inserts on important experimental techniques, reference to topical research and novel materials as well as consideration of photonic applications support research oriented teaching and learning. This book reviews nonlinear optical properties and many body phenomena evoked by high densities of quasi particles in semiconductors. Coherent dynamics and relaxation of optical excitations, carriers, excitons, electron hole plasmas etc as well as condensation phenomena are elucidated in these materials. A broad overview is provided of seminal research results augmented by detailed descriptions of the relevant experimental techniques e.g. ultrafast spectroscopy, four wave mixing and the Hanbury Brown and Twiss experiment. Offering a comprehensive introduction to hot topics in current research: polariton condensates, valley coherence and single photons to name a few, it also discusses applications of the described physical concepts in topical areas such as quantum information, photonics, spintronics and optoelectronics. Covering subjects ranging from physics to materials science and optoelectronics, the book provides a lively and comprehensive introduction to semiconductor optics beyond the linear regime. With many problems, chapter introductions, schematic depictions of physical phenomena as well as boxed inserts and a detailed index, it is suitable for use in graduate courses in physics and neighboring sciences like material science and optical communication. It is also a valuable reference resource for doctoral and advanced researchers.

Femtosecond Laser Pulses Claude Rulliere, 2007-05-27 This is the second edition of this advanced textbook written for scientists who require further training in femtosecond science. Four years after publication of the first edition, femtosecond science has overcome new challenges and new application fields have become mature. It is necessary to take into account these new developments. Two main topics merged during this period that support important scientific activities: attosecond pulses are now generated in the XUV spectral domain and coherent control of chemical events is now possible by tailoring the shape of femtosecond pulses. To update this advanced textbook, it was necessary to introduce these fields. Two new chapters are in this second edition: Coherent Control in Atoms, Molecules and Solids (Chap. 11) and Attosecond Pulses (Chap. 12) with well documented references. Some changes, addenda and new references are introduced in the first edition's ten original chapters to take into account new developments and update this advanced textbook which is the result of a scientific adventure that started in 1991. At that time, the French Ministry of Education decided that in view of the growing importance of ultrashort laser pulses for the national scientific community, a Femtosecond Centre should be created in France and devoted to the further education of scientists who use femtosecond pulses as a research tool and who are not specialists in lasers or even in optics.

Quantum Photonics: Pioneering Advances and Emerging Applications Robert W. Boyd, Svetlana G. Lukishova, Victor N. Zadkov, 2019-02-19 This book brings together reviews by internationally renowned experts on quantum optics and photonics. It describes novel experiments at the limit of single photons and presents advances in this emerging research area. It also

includes reprints and historical descriptions of some of the first pioneering experiments at a single photon level and nonlinear optics performed before the inception of lasers and modern light detectors often with the human eye serving as a single photon detector The book comprises 19 chapters 10 of which describe modern quantum photonics results including single photon sources direct measurement of the photon's spatial wave function nonlinear interactions and non classical light nanophotonics for room temperature single photon sources time multiplexed methods for optical quantum information processing the role of photon statistics in visual perception light by light coherent control using metamaterials nonlinear nanoplasmonics nonlinear polarization optics and ultrafast nonlinear optics in the mid infrared

Coherent Control in Atoms, Molecules, and Semiconductors Walter Pötz, W. Andreas Schroeder, 2012-12-06 The International Workshop on Coherent Control of Carrier Dynamics in Semiconductors was held May 19 to 22 1998 at the University of Illinois at Chicago Its intent was to bring together an international and interdisciplinary group of scientists to discuss recent progress pertinent problems and open questions in the field of coherent control in atoms molecules and semiconductors in particular Twenty seven scientists from the physical chemistry quantum optics semiconductor electrical engineering and laser communities accepted our invitation and made this event a meeting of exciting presentations and vivid discussions This volume contains the proceedings of this workshop Most speakers accepted our invitation to provide a manuscript either on specific aspects of their work or a brief review of their area of research All manuscripts were reviewed It is hoped that they provide not merely an overview of most of the issues covered during the workshop but also represent an account of the current state of coherent control in general Hence it is hoped that they are also of interest to a large number of scientists active in one of the areas listed above The organizers of this workshop would like to thank all the participants for making this meeting a complete success We are particularly indebted to Dr Larry R Cooper at the U S Office of Naval Research and Dr

Nonequilibrium Carrier Dynamics in Semiconductors Marco Saraniti, Umberto Ravaioli, 2007-12-14 Nonequilibrium Carrier Dynamics in Semiconductors is a well established specialist conference held every 2 years covering a range of topics of current interest to R D in semiconductor physics materials optoelectronics nanotechnology quantum information processing Papers accepted for publication are selected and peer reviewed by members of the Program Committee during the conference to ensure both rapid and high quality processing The proceedings of this series of conferences constitute a comprehensive source of reference of the acknowledged state of the art in the field
