Partiality and Underspecification in Information, Languages, and Knowledge Gemma Bel-Enguix, M. Dolores Jiménez-López, Roussanka Loukanova, 2017-08-21 In recent years there has been a proliferation of technological developments that incorporate processing of human language Hardware and software can be specialized for designated subject areas and computational devices are designed for a widening variety of applications At the same time new areas and applications are emerging by demanding intelligent technology enhanced by the processing

of human language These new applications often perform tasks which handle information and they have a capacity to reason using both formal and human language Many sub areas of Artificial Intelligence demand integration of Natural Language Processing at least to some degree Furthermore technologies require coverage of known as well as unknown agents and tasks with potential variations All of this takes place in environments with unknown factors The book covers theoretical work advanced applications approaches and techniques for computational models of information reasoning systems and presentation in language The book promotes work on intelligent natural language processing and related models of information thought reasoning and other cognitive processes The topics covered by the chapters prompt further research and developments of advanced systems in the areas of logic computability computational linguistics cognitive science neuroscience of language robotics and artificial intelligence among others

Language, Culture, Computation: Computational Linguistics and Linguistics Nachum Dershowitz,Ephraim Nissan,2014-12-05 This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of this 75th birthday The present three volumes liber amicorum several years in gestation honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours Yaacov s research has had a major impact not only within the walls of academia but also in the daily life of lay users of such technology that originated from his research An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s a project in which he is currently involved is proving to be a sensation as will become apparent from what follows Yaacov Choueka began his research career in the theory of computer science dealing with basic questions regarding the relation between mathematical logic and automata theory From formal languages Yaacov moved to natural languages He was a founder of natural language processing in Israel developing numerous tools for Hebrew He is best known for his primary role together with Aviezri Fraenkel in the development of the Responsa Project one of the earliest fulltext retrieval systems in the world More recently he has headed the Friedberg Genizah Project which is bringing the treasures of the Cairo Genizah into the Digital Age This third part of the three volume set covers a range of topics related to language ranging from linguistics to applications of computation to language using linguistic tools The papers are grouped in topical sections on natural language processing representing the lexicon and neologisation

The Oxford Handbook of Computational Linguistics Ruslan Mitkov,2022-05-23 Ruslan Mitkov s highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition Alongside updated accounts of the topics covered in the first edition it includes 17 new chapters on subjects such as semantic role labelling text to speech synthesis translation technology opinion mining and sentiment analysis and the application of Natural Language Processing in educational and biomedical contexts among many others The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics the methods and resources used such as statistical modelling machine learning and corpus

annotation key language processing tasks including text segmentation anaphora resolution and speech recognition and the major applications of Natural Language Processing from machine translation to author profiling The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries

The Philosophy of Theoretical Linguistics Ryan M. Nefdt, 2024-05-02 What is the remit of theoretical linguistics How are human languages different from animal calls or artificial languages What philosophical insights about language can be gleaned from phonology pragmatics probabilistic linguistics and deep learning This book addresses the current philosophical issues at the heart of theoretical linguistics which are widely debated not only by linguists but also philosophers psychologists and computer scientists It delves into hitherto uncharted territory putting philosophy in direct conversation with phonology sign language studies supersemantics computational linguistics and language evolution A range of theoretical positions are covered from optimality theory and autosegmental phonology to generative syntax dynamic semantics and natural language processing with deep learning techniques By both unwinding the complexities of natural language and delving into the nature of the science that studies it this book ultimately improves our tools of discovery aimed at one of the most essential features of our humanity our language
