Machine Learning Jason Bell, 2020-02-17 Dig deep into the data with a hands-on guide to machine learning with updated examples and more. Machine Learning Hands-On for Developers and Technical Professionals provides hands-on instruction and fully coded working examples for the most common machine learning techniques used by developers and technical professionals. The book contains a breakdown of each ML variant explaining how it works and how it is used within certain industries, allowing readers to incorporate the presented techniques into their own work as they follow along. A core tenant of machine learning is a strong focus on data preparation and a full exploration of the various types of learning algorithms illustrates how the proper tools can help any developer extract information and insights from existing data. The book includes a full complement of Instructor's Materials to facilitate use in the classroom, making this resource useful for students and as a professional reference. At its core, machine learning is a mathematical algorithm-based technology that forms the basis of historical data mining and modern big data science. Scientific analysis of big data requires a working knowledge of machine learning, which forms predictions based on known properties learned from training data. Machine Learning is an accessible, comprehensive guide for the non-mathematician, providing clear guidance that allows readers to learn the languages of machine learning, including Hadoop, Mahout, and Weka. Understand decision trees, Bayesian networks, and artificial neural networks. Implement Association Rule, Real Time, and Batch learning. Develop a strategic plan for safe, effective, and efficient machine learning. By learning to construct a system that can learn from data, readers can increase their utility across industries. Machine learning sits at the core of deep-dive data analysis and visualization, which is increasingly in

demand as companies discover the goldmine hiding in their existing data For the tech professional involved in data science Machine Learning Hands On for Developers and Technical Professionals provides the skills and techniques required to dig deeper

Data Science for Transport Charles Fox, 2018-02-27 The quantity diversity and availability of transport data is increasing rapidly requiring new skills in the management and interrogation of data and databases Recent years have seen a new wave of big data Data Science and smart cities changing the world with the Harvard Business Review describing Data Science as the sexiest job of the 21st century Transportation professionals and researchers need to be able to use data and databases in order to establish quantitative empirical facts and to validate and challenge their mathematical models whose axioms have traditionally often been assumed rather than rigorously tested against data This book takes a highly practical approach to learning about Data Science tools and their application to investigating transport issues The focus is principally on practical professional work with real data and tools including business and ethical issues Transport modeling practice was developed in a data poor world and many of our current techniques and skills are building on that sparsity In a new data rich world the required tools are different and the ethical questions around data and privacy are definitely different I am not sure whether current professionals have these skills and I am certainly not convinced that our current transport modeling tools will survive in a data rich environment This is an exciting time to be a data scientist in the transport field We are trying to get to grips with the opportunities that big data sources offer but at the same time such data skills need to be fused with an understanding of transport and of transport modeling Those with these combined skills can be instrumental at providing better faster cheaper data for transport decision making and ultimately contribute to innovative efficient data driven modeling techniques of the future It is not surprising that this course this book has been authored by the Institute for Transport Studies To do this well you need a blend of academic rigor and practical pragmatism There are few educational or research establishments better equipped to do that than ITS Leeds Tom van Vuren Divisional Director Mott MacDonald WSP is proud to be a thought leader in the world of transport modelling planning and economics and has a wide range of opportunities for people with skills in these areas The evidence base and forecasts we deliver to effectively

implement strategies and schemes are ever more data and technology focused a trend we have helped shape since the 1970 s but with particular disruption and opportunity in recent years As a result of these trends and to suitably skill the next generation of transport modellers we asked the world leading Institute for Transport Studies to boost skills in these areas and they have responded with a new MSc programme which you too can now study via this book Leighton Cardwell Technical Director WSP From processing and analysing large datasets to automation of modelling tasks sometimes requiring different software packages to talk to each other to data visualization SYSTRA employs a range of techniques and tools to provide our clients with deeper insights and effective solutions This book does an excellent job in giving you the skills to manage interrogate and analyse databases and develop powerful presentations Another important publication from ITS Leeds Fitsum Teklu Associate Director Modelling Appraisal SYSTRA Ltd Urban planning has relied for decades on statistical and computational practices that have little to do with mainstream data science Information is still often used as evidence on the impact of new infrastructure even when it hardly contains any valid evidence This book is an extremely welcome effort to provide young professionals with the skills needed to analyse how cities and transport networks actually work The book is also highly relevant to anyone who will later want to build digital solutions to optimise urban travel based on emerging data sources Yaron Hollander author of Transport Modelling for a Complete Beginner Distributed and Parallel Architectures

for Spatial Data Alberto Belussi, Sara Migliorini, 2021-01-20 This book aims at promoting new and innovative studies proposing new architectures or innovative evolutions of existing ones and illustrating experiments on current technologies in order to improve the efficiency and effectiveness of distributed and cluster systems when they deal with spatiotemporal data
