James Evans, Adrian Johns

Computer Lib Dream Machines:

Computer Lib ; Dream Machines Theodor H. Nelson, 1987 Discusses the impact of computers the ways they can and should be used programming programming languages video games privacy and computer manufacturers **Computer Lib** Theodor H. Nelson, 1983 [Computer Lib/Dream Machines](#) Ted Nelson, 2019-08 *Computer Lib* Theodor Holm Nelson, 1974 **Multimedia** Randall Packer, Ken Jordan, 2002 I recommend this book to you with an earnestness that I have seldom felt for any collection of historic texts writes William Gibson in his foreword **Osiris, Volume 38** James Evans, Adrian Johns, 2023-07-18 Perceptively explores the shifting intersections between algorithmic systems and human practices in the modern era How have algorithmic systems and human practices developed in tandem since 1800 This volume of *Osiris* deftly addresses the question dispelling along the way the traditional notion of algorithmic code and human craft as natural opposites Instead algorithms and humans have always acted in concert depending on each other to advance new knowledge and produce social consequences By shining light on alternative computational imaginaries *Beyond Craft and Code* opens fresh space in which to understand algorithmic diversity its governance and even its conservation The volume contains essays by experts in fields extending from early modern arithmetic to contemporary robotics Traversing a range of cases and arguments that connect politics historical epistemology aesthetics and artificial intelligence the contributors collectively propose a novel vocabulary of concepts with which to think about how the history of science can contribute to understanding today's world Ultimately *Beyond Craft and Code* reconfigures the historiography of science and technology to suggest a new way to approach the questions posed by an algorithmic culture not only improving our understanding of algorithmic pasts and futures but also unlocking our ability to better govern our present **HCI Remixed** Thomas Erickson, David W. McDonald, 2007-12-21 Personal and reflective essays that describe how particular works whether papers books or demos from classics to forgotten gems have influenced each writer's approach to HCI Over almost three decades the field of human computer interaction HCI has produced a rich and varied literature Although the focus of attention today is naturally on new work older contributions that played a role in shaping the trajectory and character of the field have much to tell us The contributors to *HCI Remixed* were asked to reflect on a single work at least ten years old that influenced their approach to HCI The result is this collection of fifty one short engaging and idiosyncratic essays reflections on a range of works in a variety of forms that chart the emergence of a new field An article a demo a book any of these can solve a problem demonstrate the usefulness of a new method or prompt a shift in perspective *HCI Remixed* offers us glimpses of how this comes about The contributors consider such HCI classics as Sutherland's Sketchpad Englebart's demo of NLS and Fitts on Fitts Law and such forgotten gems as Pulfer's NRC Music Machine and Galloway and Rabinowitz's Hole in Space Others reflect on works somewhere in between classic and forgotten Kidd's The Marks Are on the Knowledge Worker King Beach's Becoming a Bartender and others Some contributors turn to works in neighboring disciplines Henry Dreyfuss's book on

industrial design for example and some range farther afield to Lovelock's Gaia hypothesis and Jane Jacobs's *The Death and Life of Great American Cities*. Taken together the essays offer an accessible lively and engaging introduction to HCI research that reflects the diversity of the field's beginnings.

The New Media Reader Noah Wardrip-Fruin, Nick Montfort, 2003-02-14
A sourcebook of historical written texts, video documentation and working programs that form the foundation of new media. This reader collects the texts, videos and computer programs many of them now almost impossible to find that chronicle the history and form the foundation of the still emerging field of new media. General introductions by Janet Murray and Lev Manovich along with short introductions to each of the texts place the works in their historical context and explain their significance. The texts were originally published between World War II when digital computing, cybernetic feedback and early notions of hypertext and the Internet first appeared and the emergence of the World Wide Web when they entered the mainstream of public life. The texts are by computer scientists, artists, architects, literary writers, interface designers, cultural critics and individuals working across disciplines. The contributors include chronologically: Jorge Luis Borges, Vannevar Bush, Alan Turing, Ivan Sutherland, William S. Burroughs, Ted Nelson, Italo Calvino, Marshall McLuhan, Jean Baudrillard, Nicholas Negroponte, Alan Kay, Bill Viola, Sherry Turkle, Richard Stallman, Brenda Laurel, Langdon Winner, Robert Coover and Tim Berners-Lee. The CD accompanying the book contains examples of early games, digital art, independent literary efforts, software created at universities and home computer commercial software. Also on the CD is digitized video documenting new media programs and artwork for which no operational version exists. One example is a video record of Douglas Engelbart's first presentation of the mouse, word processor, hyperlink, computer supported cooperative work, video conferencing and the dividing up of the screen we now call non-overlapping windows; another is documentation of Lynn Herschman's *Lorna*, the first interactive video art installation.

Tattooed Bodies James Martell, Erik Larsen, 2022-01-20
The essays collected in *Tattooed Bodies* draw on a range of theoretical paradigms and empirical knowledge to investigate tattoos, tattooing and our complex relations with marks on skin. Engaging with diverse disciplinary perspectives in art history, continental philosophy, media studies, psychoanalysis, critical theory, literary studies, biopolitics and cultural anthropology, the volume reflects the sheer diversity of meanings attributed to tattoos throughout history and across cultures. Essays explore conceptualizations of tattoos and tattooing in Derrida, Deleuze and Guattari, Lacan, Agamben and Jean-Luc Nancy while utilizing theoretical perspectives to interpret tattoos in literary works by Melville, Beckett, Kafka, Genet and Jeff VanderMeer among others. *Tattooed Bodies* prompts readers to explore a few significant questions: Are tattoos unique phenomena or an art medium in need of special theoretical exploration? If so, what conceptual paradigms and theories might best shape our understanding of tattoos and their complex ubiquity in world cultures and histories?

Code Nation Michael J. Halvorson, 2020-04-22
Code Nation explores the rise of software development as a social, cultural and technical phenomenon in American history. The movement germinated in government and university labs during the 1950s, gained momentum through corporate and

counterculture experiments in the 1960s and 1970s and became a broad based computer literacy movement in the 1980s As personal computing came to the fore learning to program was transformed by a groundswell of popular enthusiasm exciting new platforms and an array of commercial practices that have been further amplified by distributed computing and the Internet The resulting society can be depicted as a Code Nation a globally connected world that is saturated with computer technology and enchanted by software and its creation Code Nation is a new history of personal computing that emphasizes the technical and business challenges that software developers faced when building applications for CP M MS DOS UNIX Microsoft Windows the Apple Macintosh and other emerging platforms It is a popular history of computing that explores the experiences of novice computer users tinkerers hackers and power users as well as the ideals and aspirations of leading computer scientists engineers educators and entrepreneurs Computer book and magazine publishers also played important if overlooked roles in the diffusion of new technical skills and this book highlights their creative work and influence Code Nation offers a behind the scenes look at application and operating system programming practices the diversity of historic computer languages the rise of user communities early attempts to market PC software and the origins of enterprise computing systems Code samples and over 80 historic photographs support the text The book concludes with an assessment of contemporary efforts to teach computational thinking to young people

Recognizing the way ways to get this books **Computer Lib Dream Machines** is additionally useful. You have remained in right site to begin getting this info. get the Computer Lib Dream Machines member that we find the money for here and check out the link.

You could purchase lead Computer Lib Dream Machines or acquire it as soon as feasible. You could speedily download this Computer Lib Dream Machines after getting deal. So, gone you require the ebook swiftly, you can straight get it. Its appropriately categorically simple and therefore fats, isnt it? You have to favor to in this vent
