Semantic Interaction for Visual Analytics Alex Endert, 2022-05-31 This book discusses semantic interaction a user interaction methodology for visual analytic applications that more closely couples the visual reasoning processes of people with the computation This methodology affords user interaction on visual data representations that are native to the domain of the data User interaction in visual analytics systems is critical to enabling visual data exploration Interaction transforms people from mere viewers to active participants in the process of analyzing and understanding data This discourse between people and data enables people to understand aspects of their data such as

structure patterns trends outliers and other properties that ultimately result in insight Through interacting with visualizations users engage in sensemaking a process of developing and understanding relationships within datasets through foraging and synthesis The book provides a description of the principles of semantic interaction providing design guidelines for the integration of semantic interaction into visual analytics examples of existing technologies that leverage semantic interaction and a discussion of how to evaluate these technologies Semantic interaction has the potential to increase the effectiveness of visual analytic technologies and opens possibilities for a fundamentally new design space for user interaction in visual analytics systems

Interactive GPU-based Visualization of Large Dynamic Particle Data Martin Falk, Sebastian Grottel, Michael Krone, Guido Reina, 2022-05-31 Prevalent types of data in scientific visualization are volumetric data vector field data and particle based data Particle data typically originates from measurements and simulations in various fields such as life sciences or physics The particles are often visualized directly that is by simple representants like spheres Interactive rendering facilitates the exploration and visual analysis of the data With increasing data set sizes in terms of particle numbers interactive high quality visualization is a challenging task This is especially true for dynamic data or abstract representations that are based on the raw particle data This book covers direct particle visualization using simple glyphs as well as abstractions that are application driven such as clustering and aggregation It targets visualization researchers and developers who are interested in visualization techniques for large dynamic particle based data Its explanations focus on GPU accelerated algorithms for high performance rendering and data processing that run in real time on modern desktop hardware Consequently the implementation of said algorithms and the required data structures to make use of the capabilities of modern graphics APIs are discussed in detail Furthermore it covers GPU accelerated methods for the generation of application dependent abstract representations This includes various representations commonly used in application areas such as structural biology systems biology thermodynamics and astrophysics

Data through Movement Francesco Cafaro, Jessica Roberts, 2022-06-01 When you picture human data interactions HDI what comes to mind The datafication of modern life along with open data initiatives advocating for transparency and access to current and historical datasets has fundamentally transformed when where and how people encounter data People now rely on data to make decisions understand current events and interpret the world We frequently employ graphs maps and other spatialized forms to aid data interpretation yet the familiarity of these displays causes us to forget that even basic representations are complex challenging inscriptions and are not neutral they are based on representational choices that impact how and what they communicate This book draws on frameworks from the learning sciences visualization and human computer interaction to explore embodied HDI This exciting sub field of interaction design is based on the premise that every day we produce and have access to quintillions of bytes of data the exploration and analysis of which are no longer confined within the walls of research laboratories This volume examines how humans interact with these data in informal not work or school

environments particularly in museums The first half of the book provides an overview of the multi disciplinary theoretical foundations of HDI in particular embodied cognition conceptual metaphor theory embodied interaction and embodied learning and reviews socio technical theories relevant for designing HDI installations to support informal learning The second half of the book describes strategies for engaging museum visitors with interactive data visualizations presents methodologies that can inform the design of hand gestures and body movements for embodied installations and discusses how HDI can facilitate people s sensemaking about data This cross disciplinary book is intended as a resource for students and early career researchers in human computer interaction and the learning sciences as well as for more senior researchers and museum practitioners who want to quickly familiarize themselves with HDI

Visual Analysis of Multilayer Networks
Fintan McGee, Benjamin Renoust, Daniel Archambault, Mohammad Ghoniem, Andreas Kerren, Bruno Pinaud, 2022-06-01 The emergence of multilayer networks as a concept from the field of complex systems provides many new opportunities for the visualization of network complexity and has also raised many new exciting challenges The multilayer network model recognizes that the complexity of relationships between entities in real world systems is better embraced as several interdependent subsystems or layers rather than a simple graph approach Despite only recently being formalized and defined this model can be applied to problems in the domains of life sciences sociology digital humanities and more Within the domain of network visualization there already are many existing systems which visualize data sets having many characteristics of multilayer networks and many techniques which are applicable to their visualization In this Synthesis Lecture we provide an overview and structured analysis of contemporary multilayer network visualization This is not only for researchers in visualization but also for those who aim to visualize multilayer networks in the domain of complex systems as well as those solving problems within application domains We have explored the visualization literature to survey visualization techniques suitable for multilayer network visualization as well as tools tasks and analytic techniques from within application domains We also identify the research opportunities and examine outstanding challenges for multilayer network visualization along with potential solutions and future research directions for addressing them

External Labeling Michael A. Bekos, Benjamin Niedermann, Martin Nöllenburg, 2022-06-01 This book focusses on techniques for automating the procedure of creating external labelings also known as callout labelings In this labeling type the features within an illustration are connected by thin leader lines called leaders with their labels which are placed in the empty space surrounding the image In general textual labels describing graphical features in maps technical illustrations such as assembly instructions or cutaway illustrations or anatomy drawings are an important aspect of visualization that convey information on the objects of the visualization and help the reader understand what is being displayed Most labeling techniques can be classified into two main categories depending on the distance of the labels to their associated features Internal labels are placed inside or in the direct neighborhood of features while external labels which form the topic of this

book are placed in the margins outside the illustration where they do not occlude the illustration itself Both approaches form well studied topics in diverse areas of computer science with several important milestones The goal of this book is twofold The first is to serve as an entry point for the interested reader who wants to get familiar with the basic concepts of external labeling as it introduces a unified and extensible taxonomy of labeling models suitable for a wide range of applications The second is to serve as a point of reference for more experienced people in the field as it brings forth a comprehensive overview of a wide range of approaches to produce external labelings that are efficient either in terms of different algorithmic optimization criteria or in terms of their usability in specific application domains The book mostly concentrates on algorithmic aspects of external labeling but it also presents various visual aspects that affect the aesthetic quality and usability of external labeling

Interaction for Visualization Christian Tominski, 2022-06-01 Visualization has become a valuable means for data exploration and analysis Interactive visualization combines expressive graphical representations and effective user interaction Although interaction is an important component of visualization approaches much of the visualization literature tends to pay more attention to the graphical representation than to interaction The goal of this work is to strengthen the interaction side of visualization Based on a brief review of general aspects of interaction we develop an interaction oriented view on visualization This view comprises five key aspects the data the tasks the technology the human as well as the implementation Picking up these aspects individually we elaborate several interaction methods for visualization We introduce a multi threading architecture for efficient interactive exploration We present interaction techniques for different types of data e g multivariate data spatio temporal data graphs and different visualization tasks e g exploratory navigation visual comparison visual editing With respect to technology we illustrate approaches that utilize modern interaction modalities e g touch tangibles proxemics as well as classic ones While the human is important throughout this work we also consider automatic methods to assist the interactive part In addition to solutions for individual problems a major contribution of this work is the overarching view of interaction in visualization as a whole This includes a critical discussion of interaction the identification of links between the key aspects of interaction and the formulation of research topics for future work with a focus on interaction

Image-Based Visualization Christophe Hurter, 2022-05-31 Our society has entered a data driven era one in which not only are enormous amounts of data being generated daily but there are also growing expectations placed on the analysis of this data Some data have become simply too large to be displayed and some have too short a lifespan to be handled properly with classical visualization or analysis methods In order to address these issues this book explores the potential solutions where we not only visualize data but also allow users to be able to interact with it Therefore this book will focus on two main topics large dataset visualization and interaction Graphic cards and their image processing power can leverage large data visualization but they can also be of great interest to support interaction Therefore this book will show how to take advantage of graphic card computation power with techniques called GPGPUs

general purpose computing on graphics processing units As specific examples this book details GPGPU usages to produce fast enough visualization to be interactive with improved brushing techniques fast animations between different data representations and view simplifications i e static and dynamic bundling techniques Since data storage and memory limitation is less and less of an issue we will also present techniques to reduce computation time by using memory as a new tool to solve computationally challenging problems We will investigate innovative data processing techniques while classical algorithms are expressed in data space e g computation on geographic locations we will express them in graphic space e g raster map like a screen composed of pixels This consists of two steps 1 a data representation is built using straightforward visualization techniques and 2 the resulting image undergoes purely graphical transformations using image processing techniques This type of technique is called image based visualization The goal of this book is to explore new computing techniques using image based techniques to provide efficient visualizations and user interfaces for the exploration of large datasets This book concentrates on the areas of information visualization visual analytics computer graphics and human computer interaction This book opens up a whole field of study including the scientific validation of these techniques their limitations and their generalizations to different types of datasets

Design of Visualizations for Human-Information Interaction Kamran Sedig, Paul Parsons, 2022-05-31 Interest in visualization design has increased in recent years While there is a large body of existing work from which visualization designers can draw much of the past research has focused on developing new tools and techniques that are aimed at specific contexts Less focus has been placed on developing holistic frameworks models and theories that can guide visualization design at a general level a level that transcends domains data types users and other contextual factors In addition little emphasis has been placed on the thinking processes of designers including the concepts that designers use while they are engaged in a visualization design activity In this book we present a general holistic framework that is intended to support visualization design for human information interaction The framework is composed of a number of conceptual elements that can aid in design thinking The core of the framework is a pattern language consisting of a set of 14 basic abstract patterns and a simple syntax for describing how the patterns are blended We also present a design process made up of four main stages for creating static or interactive visualizations The 4 stage design process places the patterns at the core of designers thinking and employs a number of conceptual tools that help designers think systematically about creating visualizations based on the information they intend to represent Although the framework can be used to design static visualizations for simple tasks its real utility can be found when designing visualizations with interactive possibilities in mind in other words designing to support a human information interactive discourse This is especially true in contexts where interactive visualizations need to support complex tasks and activities involving large and complex information spaces The framework is intended to be general and can thus be used to design visualizations for diverse domains users information spaces and tasks in different fields such as business intelligence health and medical

informatics digital libraries journalism education scientific discovery and others Drawing from research in multiple disciplines we introduce novel concepts and terms that can positively contribute to visualization design practice and education and will hopefully stimulate further research in this area
