Spezzano,2022-06-01 The chase has long been used as a central tool to analyze dependencies and their effect on queries It has been applied to different relevant problems in database theory such as query optimization query containment and equivalence dependency implication and database schema design Recent years have seen a renewed interest in the chase as an important tool in several database applications such as data exchange and integration query answering in incomplete data and many others It is well known that the chase algorithm might be non terminating and thus in order for it to find practical applicability it is crucial to identify cases where its termination is guaranteed Another important aspect to consider when dealing with the chase is that it can introduce null values into the database thereby leading to incomplete data Thus in several scenarios where the chase is used the problem of dealing with data dependencies and incomplete data arises This book discusses fundamental issues concerning data dependencies and incomplete data with a particular focus on the chase and its applications in different database areas We report recent results about the crucial issue of identifying conditions that guarantee the chase termination Different database applications where the chase is a central tool are discussed with particular attention devoted to query answering in the presence of data dependencies and database schema design Table of Contents Introduction Relational Databases Incomplete Databases The Chase Algorithm Chase Termination Data Dependencies and Normal Forms Universal Repairs Chase and Database Applications *Logic-Based Program Synthesis and Transformation* Manuel V Hermenegildo,Pedro Lopez-Garcia,2017-07-21 This book constitutes the thoroughly refereed post conference proceedings of the 26th International Symposium on Logic Based Program Synthesis and Transformation LOPSTR 2016 held in Edinburgh UK in September 2016 The 20 revised full papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 38 submissions The aim of the LOPSTR series is to stimulate and promote international research and collaboration on logic based program development LOPSTR is open to contributions in all aspects of logic based program development all stages of the software life cycle and issues of both programming in the small and programming in the large LOPSTR traditionally solicits contributions in any language paradigm in the areas of synthesis specification transformation analysis and verification specialization testing and certification composition program model manipulation optimization transformational techniques in SE inversion applications and tools **Advances in Databases: Concepts, Systems and Applications** Ramamohanarao Kotagiri,P.
