Construction Larchitecture Alain Billard:

De la construction à l'architecture - Volume 2 - Les structures en portiques Alain Billard, 2016-04-28 Dans cet ouvrage novateur d'histoire des formes l'architecture est expliquée par les impératifs de la construction schématisés par photos et dessins à l'appui. Les édifices dont le système constructif est celui de structures en portiques figurent de longue date dans presque toutes les familles d'ouvrages. Une très courante est celle des marchés de plein air et des manifestations publiques. Une autre se incarne dans les installations traditionnelles de production : ateliers d'artisans, petites fabriques, entrepôts ou bâtiments agricoles. Le monde de l'industrie et du commerce a engendré des manufactures et des marchés couverts, des serres et des halles d'exposition et aussi les bâtiments de transport : gares et aéroports qui furent précédés par les caravansérails. Le sport ne fait pas exception avec ses stades ou plus modestement les salles fermées et les piscines municipales. Du côté de l'enseignement : écoles collégiales et universités ont également adopté les structures en portiques, quoique plus tardivement. Après les immeubles de bureaux, les logements y viennent aussi, la faveur de panneaux d'habillage capables de gérer naturellement l'énergie même si l'antériorité des colombages en avait ouvert la porte. Dans le domaine des ouvrages construits pour traverser les siècles : les châteaux et palais n'avaient guère adopté les portiques que pour leurs galeries et leurs loggias ; la plupart des édifices religieux témoignent de ce système constructif : temples de l'Antiquité et temples en bois des pays d'Asie cathédrales et mosquées. On a qualifié cette architecture de transparente de l'extérieur au sens esthétique du mot, laissant voir du dedans vers le dehors et inversement car les murs se sont vidés pour laisser entrer la lumière, la nature, puis la ville et les planchers sont devenus acteurs essentiels de la stabilité des bâtiments. Architecture Francis D. K. Ching, 2019-02-28 LA RÉFÉRENCE INCONTOURNABLE DE FRANCIS CHING ENFIN EN LANGUE FRANÇAISE Considéré depuis sa première parution aux États-Unis, il y a plus de quarante ans comme une introduction essentielle au vocabulaire mental de la conception architecturale, cet ouvrage magnifiquement illustré de Francis Ching lucide brillamment les notions les plus abstraites de l'architecture. Un véritable manuel de référence, il décrypte les liens entre la forme et l'espace, du point de vue des proportions, de la lumière, des ouvertures et des enveloppes. Il synthétise également l'organisation de l'espace aux éléments et aux systèmes de circulation ainsi que la proportion et l'échelle. Les illustrations puisées dans l'histoire mondiale de l'architecture révèlent les relations entre les éléments fondamentaux de la construction, travers les époques et les cultures. Risque sismique et patrimoine bâti Alain Billard, 2014-10-02 Comment des bâtiments anciens ont-ils pu résister aux tremblements de terre dans des régions notoirement exposées aux risques sismiques ? Au fil de nombreuses missions dont il fut chargé, tant en France qu'à l'étranger, Alain Billard a longuement étudié les conséquences des séismes sur le patrimoine bâti. Architecte enseignant et membre de l'Association française du génie parasismique, il a rassemblé dans ce manuel illustré de près de 300 photographies et de 200 schémas les observations qu'il destine à tous ceux qui ont la charge de restaurer et de protéger des bâtiments endommagés ou menacés par un séisme. On verra que la réponse préalable est le renforcement, sachant que rien ne vaut pour des bâtiments neufs l'Eurocode 8, ne s'applique pas aux édifices anciens, sauf en repensant radicalement la structure. Les techniques initiales de protection qui ont permis à nombre d'édifices de traverser les siècles pour nous révéler les principes de leur conception architecturale sont ici revisités. Elles ne sauraient être exhaustives, mais elles offrent l'occasion de réfléchir et enfin de comprendre certaines des règles qui sous-tendent l'Eurocode 8, lesquelles pourront dès lors être relues sous un autre éclairage. *Publics Techniciens et ingénieurs des bureaux d'études Architectes Responsables techniques des collectivités locales Enseignants et étudiants architecture patrimoine archéologie* *Maître d'œuvre bâtiment* Leonard Hamburger, 2021-02-04 La révolution BIM peine à passer le monde du bâtiment est confronté à un nouveau bouleversement, il est sommé de contribuer à la sauvegarde du climat en concevant des bâtiments à zéro carbone.
