Information and Communications for Development 2018 World Bank, 2018-11-08. The Information and Communications for Development series looks in depth at how information and communications technologies are affecting economic growth in developing countries. This new report, the fourth in the series, examines the topic of data-driven development or how better information makes for better policies. The objective is to assist developing country firms and governments in unlocking the value of the data they hold for better service delivery and decision making and to empower individuals to take more control of their personal data. We are undoubtedly experiencing a data revolution in which our ability to generate, process, and utilize information has been magnified many times over by the machines that we increasingly rely upon. This report is about how the data revolution is changing the behavior of governments, individuals, and firms and how these changes affect the nature of development, economic, social, and cultural. How can governments extract value from data to improve service delivery in the same way that private companies have learned to do for profit? Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life? Can developing country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better? Though the report is aimed primarily at government policy makers, it also has great relevance for individuals concerned about how their personal data is used and how the data revolution might affect their future job prospects. For private sector firms, particularly those in developing countries, the report suggests how they might expand their markets and improve their competitive edge. For development professionals, the report provides guidance on how they might use data more creatively to tackle long-standing global challenges such as eliminating extreme poverty, promoting shared prosperity, or mitigating the effects of climate change. The report's chapters explore different themes associated with the supply of data, the technology underlying it, and the demand for it. An overview chapter focuses on government use of data and presentation of definitions. Part I of the report then looks at the supply side of the data sector with chapters on data connectivity and capacity, where data comes from, how it is stored, and where it goes, and data technology, specifically big data analytics and artificial intelligence, and how this is contributing to development. Part II looks at the sector's demand side with a chapter on people's use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness. Part

III brings together the policy implications for developing country stakeholders with a chapter considering government policies for data including data protection and privacy A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index DAI a composite indicator introduced in the 2016 World Development Report Digital Dividends

Communication in International Development Florencia Enghel, Jessica Noske-Turner, 2018-05-23 International development stakeholders harness communication with two broad purposes to do good via communication for development and media assistance and to communicate do good via public relations and information This book unpacks various ways in which different efforts to do good are combined with attempts to look good be it in the eyes of donor constituencies at large or among more specific audiences such as journalists or intra agency decision makers Development communication studies have tended to focus primarily on interventions aimed at doing good among recipients at the expense of examining the extent to which promotion and reputation management are elements of those practices This book establishes the importance of interrogating the tensions generated by overlapping uses of communication to do good and to look good within international development cooperation The book is a critical text for students and scholars in the areas of development communication and international development and will also appeal to practitioners working in international aid who are directly affected by the challenges of communicating for and about development
