Critical Infrastructure Assurance Guidelines for Municipal Governments: Planning for Electric Power Disruptions Chicago Metropolitan Area Critical Infrastructure Protection Program,2001 The economic prosperity and the well being of our nation s communities depend on the reliable functioning of critical infrastructures transportation banking and finance information and communications water supply systems emergency services and especially energy electric power oil and natural gas In the new economy these infrastructures are increasingly reliant on information technologies and are strongly affected by restructuring and other market forces They are much more heavily interconnected than ever before and disruptions in one

system can have significant adverse consequences both locally and regionally. Communities often are not well prepared to deal with widespread infrastructure failures which could become commonplace in the new millennium. This report prepared on behalf of the partnership is a first of a kind effort to compile this type of information on the electric power system in a form that municipal governments can use and adapt to local conditions. ComEd and Harza Engineering Company have provided valuable support for this effort. Argonne National Laboratory's Infrastructure Assurance Center compiled and integrated the planning information.

Ward-based Critical Care: a guide for health professionals Ann M Price, Dr Sally A Smith, Dr Alistair Challiner, 2016-01-01. Like the original Ward based Critical Care this second edition aims to guide practitioners in the initial management of critically ill adult patients within the ward setting. It should be of value to a wide range of healthcare professionals including junior doctors, nurses, physiotherapists and students. It will also be relevant to practitioners who are moving into any setting that cares for acutely ill patients. This volume has been slightly reorganised since the first edition to ensure that practical aspects are incorporated within the relevant sections. The book is still structured around the ABCDE approach to assessing and managing patients as this is promoted in critical care and resuscitation care training. The focus on practical examples and hot tips to aid memory of key points continues. All the chapters have been updated with the most recent guidance as available at the time of writing. This has meant that some chapters have required major revisions while others have remained relatively unchanged. Some new chapters have been included such as the ones on anaphylactic shock, patient safety dealing with pregnant women in the ward setting and massive blood transfusion. In addition, each section now starts with a chapter giving an overview of the A E approach in order to provide more detail about assessing and managing those aspects of patient care. This informative book contains many useful features such as clinical scenarios, hot tips and practical skills and the text is richly illustrated and cross referenced throughout.
