Notes to Table C4.36.

Convergent flow at junctions

Where the velocity of flow in one branch of a tee, at a converging junction, is high relative to the velocity in the other, the pressure loss factor for the latter may be negative due to the injection effect.

Tapers

Where the included angle is 10° or less, take a factor of 0.2 for an enlargement and ignore for a contraction.

Pipes

Individual designs may show wide variations over the values tabulated.

Radiators

The resistance to flow through a cast iron column radiator with 5 columns may be approximated by: $p = 5730 \Delta p^1.5$.

Specialist equipment

Manufacturers' data should be consulted in these cases.
