Elderly People and the Environment Irwin Altman, M. Powell Lawton, Joachim F. Wohlwill, 2013-06-29 The present volume in our series follows the format of the immediately preceding ones in dealing with a topical theme of considerable importance in the environment and behavior field In view of current and projected

demographic trends it is a certainty that a broad ranging set of issues concerned with the elderly and the physical environment will continue to be of focal pertinence if not of increasing importance in the remaining decades of this century. The present volume also follows in the tradition of earlier volumes in the series in being eclectic with respect to content theory and methodology and in including contributions from a variety of disciplines such as anthropology economics psychology geography and urban and regional planning. To have encompassed the whole array of disciplines and topics in this emerging field in a single volume would have been impossible. We trust that the sample of contributions that we have selected is provocative and that it will illustrate the range of problems and topics and point to promising areas of study and analysis. We are pleased to have M. Powell Lawton as a guest co editor for this volume. His broad ranging expertise perceptive judgment and fine editorial talents have contributed enormously to the volume.

Spatafora, 2015-03-30. This volume includes treatments of systematics and related topics for both fungi and fungus like organisms in four eukaryotic supergroups as well as specialized chapters on nomenclature techniques and evolution. These organisms are of great interest to mycologists plant pathologists and others including those interested in the animal parasitic Microsporidia. Our knowledge of the systematics and evolution of fungi has made great strides since the first edition of this volume largely driven by molecular phylogenetic analyses. Consensus among mycologists has led to a stable systematic treatment that has since become widely adopted and is incorporated into this second edition along with a great deal of new information on evolution and ecology. The systematic chapters cover occurrence distribution economic importance morphology and ultrastructure development of taxonomic theory classification and maintenance and culture. Other chapters deal with nomenclatural changes necessitated by revisions of the International Code of Nomenclature for algae fungi and plants including the elimination of separate names for asexual states as well as methods for preservation of cultures and specimens character evolution and methods for ultrastructural study the fungal fossil record and the impact of whole genomes on fungal studies.
