Designing for Situation Awareness, 2003 Enhancing situation awareness SA is a major design goal for projects in many fields including aviation ground transportation air traffic control nuclear power medicine space and systems maintenance Many of the errors and failures that have been found to occur in complex systems are the result of failures in SA The creation of SA oriented system designs should directly reduce the incidence of such problems However little information exists in an integrated format to support the designer in creating systems that support SA Designing for Situation Awareness provides a means for creating the truly user centered system designs that are needed in today s complex world Based on theoretical and empirical knowledge on SA Designing for Situation Awareness provides methodology and design guidance for creating systems that will keep operator SA high in order to support real time decision making and performance requirements This book is directed at designers and human factors researchers and practitioners in a wide variety of fields and is liberally illustrated with actual design examples It also supports graduate level teaching on situation awareness and design and is relevant to human factors professionals in both the U S and Europe **Designing for Situation Awareness** Mica R.

Landry, 2016-09-19 More and more the most traditional and typical applied ergonomics issues of the activities related to sea shipping vehicle driving and flying are required to deal with some emerging topics related to the growing automatism and manning reduction the ICT s advances and pervasiveness and the new demographic and social phenomena such as aging or multiculturalism With contributions from expert researchers professionals and doctoral students from a wide number of countries such as Australia Austria Canada Italy Germany the Netherlands Norway Sweden UK and USA this multi contributed book will explore traditional and emerging topics of Human Factors centered around the maritime road rail and aviation transportation domains

Advances in Human Aspects of Transportation: Part I Neville Stanton, Giuseppe Di Bucchianico, Andrea Vallicelli, Steven Landry, 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research design development operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure aviation and maritime transportation This book presents recent advances in the Human Factors aspects of Transportation These advances include accident analysis automation of vehicles comfort distraction of drivers understanding of distraction and how to avoid it environmental concerns in vehicle systems design intelligent transport systems methodological developments new systems and technology observational and case studies safety situation awareness skill development and training warnings and workload This book brings together the most recent human factors work in the transportation domain including empirical research human performance and other types of modeling analysis and development The issues facing engineers scientists and other practitioners of human factors in transportation research are becoming more challenging and more critical The common theme across these sections is that they deal with the intersection of the human and the system Moreover many of the chapter topics cross section boundaries for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool This is in keeping with the systemic nature of the problems facing human factors experts in rail and road aviation and maritime research it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system
