

THE BIG BANG
The beginning of the universe, approximately 13.8 billion years ago, when the universe expanded from a single point.

THE RADIATION ERA
The first era of the universe, lasting from the Big Bang to about 47,000 years after the Big Bang. The universe was filled with a hot, dense plasma of particles and radiation.

THE MATTER ERA
The second era of the universe, lasting from about 47,000 years after the Big Bang to about 9 billion years after the Big Bang. The universe was dominated by matter, and galaxies began to form.

THE DARK ENERGY ERA
The third era of the universe, lasting from about 9 billion years after the Big Bang to the present. The universe is dominated by dark energy, which is causing the universe to expand at an accelerating rate.

THE FUTURE OF THE UNIVERSE
The future of the universe is uncertain, but there are two main possibilities: the heat death of the universe, where the universe expands forever and eventually reaches a state of maximum entropy, or the Big Crunch, where the universe eventually collapses back into a single point.
