Dan Rope at the Bureau of Labor Statistics and Dan Carr at George Mason University to produce a graphics production library called GPL this time in Java Our goal was to develop graphics components This book was nourished by that project So far the

Multiple Regression/Correlation Analysis for the Behavioral Sciences Jacob Cohen, Patricia Cohen, Stephen G. West, Leona S. Aiken, 2013-06-17 This classic text on multiple regression is noted for its nonmathematical applied and data analytic approach. Readers profit from its verbal conceptual exposition and frequent use of examples. The applied emphasis provides clear illustrations of the principles and provides worked examples of the types of applications that are possible. Researchers learn how to specify regression models that directly address their research questions. An overview of the fundamental ideas of multiple regression and a review of bivariate correlation and regression and other elementary statistical concepts provide a strong foundation for understanding the rest of the text. The third edition features an increased emphasis on graphics and the use of confidence intervals and effect size measures and an accompanying website with data for most of the numerical examples along with the computer code for SPSS, SAS, and SYSTAT at www.psypress.com. 9780805822236. Applied Multiple Regression serves as both a textbook for graduate students and as a reference tool for researchers in psychology, education, health sciences, communications, business, sociology, political science, anthropology, and economics. Factor Analysis and Dimension Reduction in R G. David Garson, 2022-12-16 Factor Analysis and Dimension Reduction in R provides coverage with worked examples of a large number of dimension reduction procedures along with model performance metrics to compare them. Factor analysis in the form of principal components analysis (PCA) or principal factor analysis (PFA) is familiar to most social scientists. However, what is less familiar is understanding that factor analysis is a subset of the more general statistical family of dimension reduction methods. The social scientist's toolkit for factor analysis problems can be expanded to include the range of solutions this book presents. In addition to covering FA and PCA with orthogonal and oblique rotation

this book's coverage includes higher order factor models bifactor models models based on binary and ordinal data models based on mixed data generalized low rank models cluster analysis with GLRM models involving supplemental variables or observations Bayesian factor analysis regularized factor analysis testing for unidimensionality and prediction with factor scores The second half of the book deals with other procedures for dimension reduction These include coverage of kernel PCA factor analysis with multidimensional scaling locally linear embedding models Laplacian eigenmaps diffusion maps force directed methods t distributed stochastic neighbor embedding independent component analysis ICA dimensionality reduction via regression DRR non negative matrix factorization NMF Isomap Autoencoder uniform manifold approximation and projection UMAP models neural network models and longitudinal factor analysis models In addition a special chapter covers metrics for comparing model performance Features of this book include Numerous worked examples with replicable R code Explicit comprehensive coverage of data assumptions Adaptation of factor methods to binary ordinal and categorical data Residual and outlier analysis Visualization of factor results Final chapters that treat integration of factor analysis with neural network and time series methods Presented in color with R code and introduction to R and RStudio this book will be suitable for graduate level and optional module courses for social scientists and on quantitative methods and multivariate statistics courses
